

(Continued from 1st page.)

reflecting firmness in the market, caused an early advance of 3 to 6 points in raw sugar futures. Realizing sales near the close checked the upward movement and brought about a partial reaction, leaving final prices two to three points net higher. No changes were noted in the refined situation.

London, Jan. 27th.—There seems to be good prospect for successful intervention to end the railway strike. The emergency committee of the Trades Union Congress, following negotiations carried on during the day with the Associated Society of Locomotive Engineers and Firemen and the railway managers, tonight submitted fresh proposals to the latter, the proposals have the approval of Mr. Bromley, Secretary of the strikers association.

Rome, Jan. 27th.—Premier Mussolini and Pachitch, respectively Premier of Italy and Foreign Minister of Jugo-Slavia, signed the treaty today by which Fiume becomes Italian territory. The immediate result of the agreement will be the possibility of Jugo-Slavia decreasing her army, now 110,000 men, which will lessen to a great extent the Jugo-Slavia budget.

London, Jan. 27th.—As far as the responsible people here, who are connected with the relations between the Dominion and Imperial Governments, are concerned, the opinion is strengthening that the Government is entirely well disposed towards inter-imperial aspirations. The appointment of Mr. J. H. Thomas as Colonial Secretary has been received with distinct approval.

Boston, Jan. 27th.—A cold wave that swept down upon New England out of the N. W. last night, with the mercury tumbling to 20 or more degrees below zero in Maine, New Hampshire and Vermont early today, brought to Boston the coldest January 27th on record and the coldest day in four years, the temperature being 6 degrees below zero. Scores of persons were reported homeless and tonight as the result of fires throughout New England, caused in large measure by overheated stoves and furnaces. The property loss was expected to be well in excess of \$300,000. In Swan Island harbour, Maine, the steamer Governor Bodwell was driven ashore and wrecked by the gale. Passengers and crew were rescued by motor boats. The coldest official temperature in New England was reported at Keene N. H. where the government observatory announced that the mercury had fallen to 25 degrees below zero.

New York, Jan. 27th.—Sir Auckland Geddes, British Ambassador to the United States, sailed for home yesterday on the Aquitania. An unusual honour was paid the departing ambassador as the Aquitania steamed down the bay, when the soldiers at Governor Island fired a 21 gun salute.

Don't Scratch Teeth

Beautify them in this scientific way

Don't try to whiten teeth by use of harsh abrasive. The enamel, if you harm it, won't come back. Polishing agents should be mild, as in Pepsodent.

Combat the dingy film. Do it as millions now are doing—in this scientific way. Then the prettier teeth you see everywhere now will come to you and yours.

The cloudy film

Your teeth are coated with a viscous film. It clings to teeth, gets between the teeth and stays. When not combated, it forms coats which are the basis of tartar. Film absorbs stains, making the teeth look dingy. Those cloudy teeth rob millions of much beauty.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed in it, and they,

with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film.

Ways to end it

Film has been the great tooth problem. Old methods did not end it. So well-brushed teeth discolored and decayed. Tooth troubles have been constantly increasing. Now dental science, after long research, has found two ways to fight film. Able authorities have proved their efficiency. Careful people the world over now see and feel the results.

A new-type tooth paste has been created, made to meet modern requirements. The name is Pepsodent. These two film combatants are embodied in it for daily application.

Five new effects

Pepsodent brings five effects which science now demands. One is to multiply the starch diges-

tant in the saliva. That is there to digest starch deposits on teeth before they ferment and form acids. One is to multiply the alkalinity of the saliva. That is Nature's agent for neutralizing mouth acids—the cause of tooth decay. It leaves the teeth so highly polished that film less easily clings.

All five effects come from every application. So film, starch and acids are constantly combated. Forces are created which night and day fight enemies of teeth.

To countless homes, all the world over, this has brought a new era in teeth cleaning. The results will be life-lasting.

Send the coupon. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear. The results will surprise and convince you. Cut out the coupon now.
