Do This

Then see if your friends notice
prettier teeth

Make this pleasant ten-day test. See what it does for your teeth. Then judge for yourself — by the clear results — how much this method means.

Millions of people have thus found a way to whiter, cleaner, safer teeth. And you will also find it.

It fights film

This method combats the film on teeth — that viscous coat you feel. Film is the teeth's great enemy. It clings to teeth, gets between the teeth and stays.

Brushing in the old ways does not end this film. And most tooth troubles are caused by what is left.

Film absorbs stains, making the teeth look dingy. It is the basis of

tartar. It holds food substance which ferment, and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Very few people have escaped these troubles caused by film.

Two new methods

Dental science has now found two methods to fight film. Many careful tests have proved their efficiency. Leading dentists everywhere now advise their daily use.

The methods are embodied in a dentifrice called Pepsodent. Other factors, now considered essential, are included with it.

FREE

This Ten-Day test costs you nothing. Simply mail the coupon. Then watch the delightful effects.

Pepsodent combats the film with every application. It keeps teeth high polished, so film less easily adheres.

It also stimulates the salivary flow. That is Nature's great tooth-protecting agent. It multiplies the starch digestant in the saliva, to digest starch deposits which often cling and form a film. It multiplies the alkalinity of saliva, to neutralize acids which cause tooth decay.

Thus every use brings five desired effects which old methods failed to bring.

The modern way

Pepsodent is based on modern research. It does what authorities now regard as essential. Half the world over it is displacing old methods, largely by dental advice.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

Watch all the good effects. The book we send will tell the reason for them. Then decide if this method, in your family, should supersede the old. Cut out the coupon now.
