Re: Request for Data Regarding a Storm Sewer Trench in the Tutu Wells Site Area,
St. Thomas, U.S. Virgin Islands.

Dear Mr. Green:

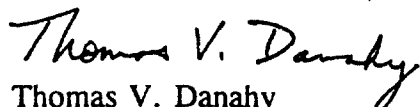

On January 4, 1994 Caribbean Hydro-Tech, Inc. received analytical results of samples from a storm sewer trench (Project: Four Winds - St. Thomas) from Savannah Laboratories & Environmental Services, Inc. The samples were taken on December 30, 1993 and included the following parameters: Purgeables (601/602), Polynuclear Aromatic Hydrocarbons (610) and oil and grease.

Geraghty & Miller, Inc. is requesting any additional information regarding this sampling event, including methodology of sampling and exact sampling locations. If possible, we would be interested in receiving a sketch map of the storm sewer system with the exact location and depth of the system and locations of sampling events.

We appreciate your cooperation. If you have any questions, please call.

Sincerely,

GERAGHTY & MILLER, INC.
