RE: Tutu Service Station Investigation Work Plan

Dear Ms. Kwan:

This letter is intended to follow up on our meeting on May 2nd at the USEPA Region II office attended by yourself, Sarah Odland (CDM-Federal Programs Corporation), Ana Gloria Ramos (Esso/TEIC Coordinator), Jose Agrelot (Soil Tech), and Thomas Danahy and Dan Nachman of Geraghty & Miller, Inc. We believe our meeting was very productive, resulting in several technical agreements for the above-referenced work plan. Geraghty & Miller is currently revising the work plan in accordance with our discussions. The USEPA will be responding to our request to use Schedule 40 PVC rather than stainless steel for monitoring well casing and screen. The revised work plan will be submitted to the USEPA no later than May 30, 1991.

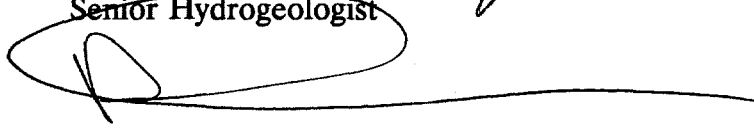

The 2nd quarter sampling report (February 1991 sampling event) for the Tutu Water Supply Wells will be submitted to the USEPA no later than May 13, 1991. We will be recommending the deletion of nine water supply wells from the sampling list due to non-detectable results for parameters of concern. We request that the USEPA respond to the 2nd quarter sampling report recommendations by May 24, 1991 in order to allow for logistical planning of the 3rd quarterly sampling event scheduled for the week of June 4, 1991.

Results of the 1st and 2nd quarter sampling events will be distributed to the well owners via Julie May Monsanto (USVI, Department of Planning and Natural Resources) with the footnote that the results have not yet been reviewed or validated by the USEPA.

Sincerely,

GERAGHTY & MILLER, INC.
