Re: Groundwater Sampling Results for the Mathias Well, Tutu Wells Site, St. Thomas, U.S. Virgin Islands

Dear Mr. Reed:

As you requested, enclosed please find the groundwater sampling results for the Mathias well. This well was sampled quarterly by Soil Tech Inc. and Geraghty and Miller, Inc. for the Tutu Environmental Investigation Committee (TEIC) for volatile organic compounds (VOCs) from October 1990 through February 1992 (attached Table 10). In October 1990 and February 1992, samples were also analyzed for base neutral and acid extractable organic compounds (BNAs) and metals (attached Tables 13 and 15, respectively).

Also enclosed are the Mathias groundwater sampling results of the October 6-7, 1987 sampling event conducted by a Roy F. Weston Technical Assistance Team for the U.S. Environmental Protection Agency (USEPA). These results are included after correspondence with, and approval from, Caroline Kwan of the USEPA.
