(a) Estimated using the Bi-212 or when Bi-212 is not reported using the Pb-212 or Tl-208 with the assumption of secular equilibrium..
(b) Estimated using the Bi-214 or when Bi-214 is not reported using the Pb-214 with the assumption of secular equilibrium.
(c) Estimated using the Ac-228 energy peak.
(d) Estimated using the Pa-234m or when Pa-234m is not reported using the Th-234 with the assumption of secular equilibrium.
NR - Not Reported, NA - Not Applicable, J - Reported value is estimated, Q - duplicate analysis not reported
(DUP) - Laboratory Duplicate

Table 5-9B

Alpha Spectroscopy Analyses Results of Surface and Subsurface Waste and Sediment Samples

NA - Not Applicable U - Isotope was not detected above the noted MDC J - reported value is estimated

(DUP) - Laboratory Duplicate

(a) Sum of radium 226 and radium 228.

(b) Sum of uranium 234, uranium 235 and uranium 238.

(c) Activity to mass conversion factors range from 0.67 to 1.5 pCi/µg (USEPA 2000. National Primary Drinking Water Regulations; Final Rule 65 FR 236; December 7, 2000) and the major challenge is to determine which factor is most appropriate to use to calculate an exposure point concentration for compliance monitoring or to use in a human health risk assessment. Ideally the activity to mass ratio should be calculated for each water supply but if this is not possible, there is a health protective approach to evaluate compliance with the regulatory level. A two-tiered approach can be used to initially screen for compliance with the regulatory level. The first tier involves using a conservative activity to mass ratio of 0.67 pCi/µg to convert activity units in pCi to mass units in µg. The second tier would be to determine the actual activity to mass ratio for a particular water supply. For our screening purpose the first tier was used. If concentrations are less than 30 µg/L, then the uranium MCL has been met and no need to go to the second tier.

Work Assignment No. 1455, St. Croix Alumina (Renaissance Park)
Contract No.: EP-S5-06-04, TDD No.: S05-0013-1104-030

Dear Mr. Acosta:

Weston Solutions, Inc. (WESTON®) is pleased to submit the complete Sampling Trip Report for the Expanded Site Inspection and Removal Assessment at the St. Croix Alumina (Renaissance Park) site, including the revised Sample Location Map. WESTON Site Assessment Team and Removal Support Team personnel collected soil, sediment, groundwater, surface water, and waste samples from locations on and within the vicinity of the site from September 12-21, 2011. CLP samples were collected under Case No. 41746. If you have any questions, please contact me at (732) 417-5826.

Very truly yours,

WESTON SOLUTIONS, INC.

Gerald V. Gilliland, P.G.
Senior Technical Manager

SAMPLING TRIP REPORT

SITE NAME: St. Croix Alumina (Renaissance Park)
DCN: 1455-2A-ARGD
W.O.: 20405.012.013.1455.00
CLP Case No.: 41746

EPA I.D. NO.: VIN000206465

SAMPLING DATES: September 12-21, 2011

1. Site Location: Refer to Figure 1

2. Sample Locations: Refer to Figure 2

3. Sample Descriptions: Refer to Table 1

4. Laboratories Receiving Samples:

Sample Type & No.	Name and Address of Laboratory
TCL Volatiles (VOCs), TCL Semivolatiles (SVOCs),and TCL Aroclors	Chemtech Consulting Group (CHEM) 284 Sheffield St. Mountainside, NJ 07092
TAL Inorganics including mercury (Hg), Total Organic Carbon (TOC), Chlorides, Particle Size	USEPA Region 2 Laboratory (EPA-DESA) 2890 Woodbridge Avenue Building 209, MS 230 Edison, NJ 08837
Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U and Ra-226/Ra-228/Total Uranium/Isotopic Thorium	USEPA National Air and Radiation Environmental Laboratory (EPA-NAREL) 540 S. Morris Avenue Montgomery, AL 36115

5. Sample Dispatch Data (also see Tables 2, 3, and 4):

- Seven soil samples for TAL Inorganics (including Hg), three aqueous samples for Chlorides and TAL Inorganics (including Hg), and three sediment samples for Particle Size, TOC, and TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/12/11 at 1630 hours via Federal Express Airbill No. 8736 9394 8787.

- Twelve aqueous samples for Chlorides and TAL Inorganics (including Hg), thirteen sediment samples for Particle Size, TOC, and TAL Inorganics (including Hg), and one aqueous sample for TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/13/11 at 1645 hours via Federal Express Airbill No. 8747 3102 7524.
- Three soil samples, three aqueous samples, and three sediment samples for TCL SVOCs and TCL Aroclors were shipped to the Chemtech Consulting Group laboratory on 09/13/11 at 1645 hours via Federal Express Airbill No. 8736 9394 8798.
- Four aqueous samples for Chlorides and TAL Inorganics (including Hg), and four sediment samples for TOC and TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/14/11 at 1645 hours via Federal Express Airbill No. 8736 9394 8802.
- Two aqueous samples and two sediment samples for TCL SVOCs and TCL Aroclors were shipped to the Chemtech Consulting Group laboratory on 09/14/11 at 1645 hours via Federal Express Airbill No. 8736 9394 8813.
- Twenty-five aqueous samples for Chlorides and TAL Inorganics (including Hg) and twenty-one sediment samples for TOC and TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/15/11 at 1645 hours via Federal Express Airbill No. 8747 3102 7535.
- Three aqueous samples and four sediment samples for TCL SVOCs and TCL Aroclors were shipped to the Chemtech Consulting Group laboratory on 09/15/11 at 1645 hours via Federal Express Airbill No. 8736 9394 5170.
- Four aqueous samples for Chlorides and TAL Inorganics (including Hg), nine sediment samples for TOC and TAL Inorganics (including Hg), and thirty-seven sediment samples for Particle Size were shipped to the EPA-DESA laboratory on 09/16/11 at 1645 hours via Federal Express Airbill No. 8747 3102 7557.
- Two aqueous samples for Chlorides and TAL Inorganics (including Hg), and two aqueous samples for TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/16/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4694.
- Two aqueous samples for TCL SVOCs and TCL Aroclors were shipped to the Chemtech Consulting Group laboratory on 09/16/11 at 1645 hours via Federal Express Airbill No. 8747 3102 7546.
- Seventeen waste samples for TAL Inorganics (including Hg) were shipped as Dangerous Goods, for having a pH greater than 11, to the EPA-DESA laboratory on 09/19/11 at 1400 hours via Federal Express Airbill No. 8683 1599 4729.
- Seventeen waste samples for TAL Inorganics (including Hg), and three sediment samples for TOC and TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/19/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4710.
- Four waste samples for TCL SVOCs and TCL Aroclors were shipped as Dangerous Goods, for having a pH greater than 11, to the Chemtech Consulting Group laboratory on 09/19/11 at 1400 hours via Federal Express Airbill No. 8683 1599 4718.
- Three waste samples, one aqueous sample, and one sediment sample for TCL SVOCs and TCL Aroclors, three aqueous samples for TCL VOCs, and one aqueous sample for TCL VOCs, TCL SVOCs and TCL Aroclors were shipped to the Chemtech Consulting

Group laboratory on 09/19/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4753.

- Twenty waste samples for Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U were shipped to the EPA-NAREL laboratory on 09/19/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4731.
- Twenty-three waste samples for TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/20/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4775.
- Six aqueous samples for TCL VOCs, four aqueous sample for TCL SVOCs and TCL Aroclors, and one aqueous sample for TCL VOCs, TCL SVOCs and TCL Aroclors, were shipped to the Chemtech Consulting Group laboratory on 09/20/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4742.
- Twenty waste samples for Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U were shipped to the EPA-NAREL laboratory on 09/20/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4764.
- Four waste samples, two aqueous samples, seven sediment samples, and one soil sample for TAL Inorganics (including Hg), and twenty-one aqueous samples for Chlorides and TAL Inorganics (including Hg) were shipped to the EPA-DESA laboratory on 09/21/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4797.
- Five waste samples, one aqueous sample, four sediment samples, and one soil sample for TCL SVOCs and TCL Aroclors, and two aqueous samples for TCL VOCs were shipped to the Chemtech Consulting Group laboratory on 09/21/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4786.
- Five waste samples for Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U were shipped as Dangerous Goods, for having a pH greater than 11, to the EPA-NAREL laboratory on 09/21/11 at 1400 hours via Federal Express Airbill No. 8683 1599 4740.
- Five waste samples, six sediment samples, and eleven soil samples for Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U were shipped to the EPA-NAREL laboratory on 09/21/11 at 1645 hours via Federal Express Airbill No. 8747 3102 4801.
- Twenty-one waste samples for Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U were shipped as Dangerous Goods, for having a pH greater than 11, to the EPA-NAREL laboratory on 09/21/11 at 0930 hours via Federal Express Airbill No. 8683 1599 4730.
- Ten waste samples for TAL Inorganics (including Hg) were shipped as Dangerous Goods, for having a pH greater than 11, to the EPA-DESA laboratory on 09/22/11 at 1000 hours via Federal Express Airbill No. 8683 1591 4158.
- One aqueous sample for Chlorides and TAL Inorganics (including Hg), and one aqueous sample for TAL Inorganics (including Hg), were shipped to the EPA-DESA laboratory on 09/22/11 at 1000 hours via Federal Express Airbill No. 8747 3102 6138.
- One aqueous sample for TCL VOCs and one aqueous sample for TCL SVOCs, TCL Aroclors, and TCL VOCs were shipped as Dangerous Goods, for having a pH greater than 11, to the Chemtech Consulting Group laboratory on 09/22/11 at 1000 hours via Federal Express Airbill No. 8683 1599 4751.
- Three waste samples for Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U were shipped

as Dangerous Goods, for having a pH greater than 11, to the EPA-NAREL laboratory on 09/22/11 at 1000 hours via Federal Express Airbill No. 8683 1591 4147.

- One waste sample and seven sediment samples for Gamma Spec Ra-226/Ra-228/K-40, Isotopic Th/U were shipped to the EPA-NAREL laboratory on 09/22/11 at 1000 hours via Federal Express Airbill No. 8747 3102 6116.
- Thirteen aqueous samples for Ra-226/Ra-228/Total Uranium/Isotopic Thorium were shipped to the EPA-NAREL laboratory on 09/22/11 at 1300 hours via Federal Express Airbill No. 8658 6964 2224.

Mike Ferriola	EPA	OSC, Radioisotope Screening

7. Additional Comments:

From September 12-21, 2011, WESTON personnel collected totals of 17 soil samples, 11 groundwater samples, 11 filtered groundwater samples, 52 surface water samples, 59 sediment samples, and 74 waste samples (the totals include environmental duplicate samples) from locations on and within the vicinity of the St. Croix Alumina (Renaissance Park) site.

WESTON logged sample locations electronically using GPS equipment and performed post-processing differential correction of the GPS data in accordance with EPA Region 2 GPS Standard Operating Procedures. The processed GPS data for all samples collected has been transferred to the Sample Location Map (Figure 2) using Geographic Information Systems.

Soil and waste samples were collected using dedicated, disposable plastic scoops and aluminum trays. Surface soil samples were collected from the 0- to 6-inch depth interval below ground surface, and surface waste samples were collected from the 0- to 3-inch depth interval, unless otherwise noted in Table 1. Subsurface soil and waste samples were retrieved from the depths noted in Table 1 with decontaminated bucket augers. All remaining soil or waste not used for laboratory analysis was discarded at the sampling location.

Surface water samples were collected directly into the required containers, without the use of sampling devices, by submerging the bottles. At each specific location where both surface water and sediment samples were collected, surface water samples were collected prior to sediment samples. Sediment samples were collected with dedicated, disposable plastic scoops and aluminum trays from the 0- to 6-inch depth interval, unless otherwise noted in Table 1. All remaining sediment not used for laboratory analysis was discarded at the sampling location.

Ground water samples were collected from existing on-site monitoring wells using low-flow sampling procedures. Wells were purged and sampled at a flow rate below 500 milliliters per minute (mL/min) with a bladder pump. Dedicated, disposable bladders and sample tubing were used for each well. During well purging, the following field indicator parameters were measured and recorded at 3- to 5-minute intervals: pH, temperature, dissolved oxygen (DO), and conductivity. Wells were purged until these indicator parameters stabilized for three consecutive readings. In-line analyzers and continuous readout displays were used. The bladder pump was decontaminated prior to sampling and between well sampling locations. Filtered ground water samples were collected through dedicated, disposable, 0.45-micron filter cartridges.

Five rinsate blanks were collected to demonstrate adequate decontamination of non-dedicated sampling equipment. Four trip blank samples (in conjunction with the groundwater samples for VOC analysis) were collected to demonstrate that atmospheric contaminants were not seeping into sample vials and that there was no cross-contamination between samples.

All samples were collected at the St. Croix Alumina (Renaissance Park) site as part of a combined Expanded Site Inspection and Removal Assessment with radiological measurements under the Region V Superfund Technical Assessment and Response Team III (START III)

contract and Removal Support Team 2 (RST 2) contract. Samples for TCL Organics analyses (TCL VOCs, TCL SVOCs, and TCL Aroclors) were shipped to CHEMTECH for analysis through the EPA Contract Laboratory Program (CLP) under Case No. 41746. Samples designated for TAL Inorganics (including Hg), Chlorides, TOC, and Particle Size analyses were shipped to the EPA-DESA laboratory for analysis. Samples designated for radiological analyses were shipped to the EPA-NAREL laboratory for analysis. The Chain-of-Custody Records and Federal Express Airbills are presented in Attachment 1.

FedEx Express — International Air Waybill

For FedEx services worldwide.

DELIVERED 9/14/11

✓ Sender's Copy

1 From *Please print and press hard.*

Date 09/12/11 Sender's FedEx Account Number 108067691

Sender's Name Dan Carlson Phone (973) 271-7633

Company Weston Solutions, Inc.

Address Tamarind Reef Hotel

Address 5001 Tamarind Reef

City Christiansted State/Province VI

Country USA ZIP/Postal Code 00820

2 To

Recipient's Name John Birri Phone (732) 906-6886

Company USEPA Region 2

Address 2890 Woodbridge Ave, Dept/Floor

Address Building 209 MS-230

City Edison State/Province NJ

Country USA ZIP/Postal Code 08837

Recipient's Tax ID Number for Customs Purposes
e.g., GST/RFC/VAT/IN/EIN/ABN, or as locally required.

3 Shipment Information

☐ For EU Only: Tick here if goods are not in free circulation and provide C.I.

Total Packages (Shipper's Load and Count/SLAC) 1 Total Weight 30 ☒ lbs ☐ kg DIM L / W / H ☐ in. ☐ cm

Commodity Description	Harmonized Code	Country of Manufacture	Value for Customs
DETAILS REQUIRED. PRINT IN ENGLISH. Environmental Samples (soil & water) For LAB TESTING ONLY			

Has EEI been filed in AES? (For U.S. Export Only: Check One)
☐ No EEI required, value $2,500 or less per Sch. B Number, no license required (NLR), not subject to ITAR.
☐ No EEI required, enter exemption number:
☐ Yes – Enter AES proof of filing citation:
If other than NLR, enter License Exception:

Total Declared Value for Carriage

Total Value for Customs (Same Currency) $2001 USD

4 Express Package Service

Packages up to 150 lbs. / 68 kg. For packages over 150 lbs. (68 kg), use the FedEx Expanded Service Intl. Air Waybill.

☒ FedEx Intl. Priority ☐ FedEx Intl. First (Available to select locations.)
☐ _____ ☐ FedEx Intl. Economy (FedEx Envelope and FedEx Pak rate not available.)

5 Packaging *These unique brown boxes with special pricing are provided by FedEx for FedEx Intl. Priority only.

☐ FedEx Envelope ☐ FedEx Pak ☐ FedEx Box ☐ FedEx Tube
☒ Other cooler ☐ FedEx 10kg Box* ☐ FedEx 25kg Box*

6 Special Handling

☐ HOLD at FedEx Location ☐ SATURDAY Delivery (Available to select locations for FedEx Intl. Priority only.)

7 Payment Complete payment options for both transportation charges and duties and taxes.

Bill transportation charges to: Enter FedEx Acct. No. or Credit Card No. below.

☐ Sender Acct. No. in Section 1 will be billed. ☐ Recipient ☒ Third Party ☐ Credit Card ☐ Cash/Check/Cheque (FedEx Use Only)

FedEx Acct. No. 108 067 691

Credit Card No.

Credit Card Exp. Date

Bill duties and taxes to: ALL shipments may be subject to Customs charges, which FedEx does not estimate prior to clearance. Enter FedEx Acct. No. below.

☐ Sender Acct. No. in Section 1 will be billed. ☐ Recipient ☒ Third Party

FedEx Acct. No. 108 067 691

8 Your Internal Billing Reference First 24 characters will appear on invoice.

20405.016.013.1455.00

9 Required Signature

Use of this Air Waybill constitutes your agreement to the Conditions of Contract on the back of this Air Waybill, and you represent that this shipment does not require a U.S. State Department License or contain dangerous goods. Certain international treaties, including the Warsaw Convention, may apply to this shipment and limit our liability for damage, loss, or delay, as described in the Conditions of Contract. WARNING: These commodities, technology, or software were exported from the United States in accordance with Export Administration Regulations. Diversion contrary to U.S. law prohibited.

Sender's Signature: _____

This is not authorization to deliver this shipment without a recipient signature.

Not all services and options are available to all destinations. Dangerous goods cannot be shipped using this Air Waybill.

Recipient's Tax ID Number for Customs Purposes
e.g., GST/RFC/VAT/IN/EIN/ABN, or as locally required.

3 Shipment Information

☐ For EU Only: Tick here if goods are not in free circulation and provide C.I.

Total Packages (Shipper's Load and Count/SLAC) 5

Total Weight 269 ☒ lbs ☐ kg

DIM L / W / H ☐ in. ☐ cm

Commodity Description	Harmonized Code	Country of Manufacture	Value for Customs
Environmental Samples (soil + water) for LAB ~~ANA~~ TESTING ONLY			

Has EEI been filed in AES? *For U.S. Export Only: Check One*

☐ No EEI required, value $2,500 or less per Sch. B Number, no license required (NLR), not subject to ITAR.

☐ No EEI required, enter exemption number:

☐ Yes – Enter AES proof of filing citation:

If other than NLR, enter License Exception:

Total Declared Value for Carriage

Total Value for Customs (Specify Currency) $200.- USD

4 Express Package Service

Packages up to 150 lbs. / 68 kg — *For packages over 150 lbs. (68 kg), use the FedEx Expanded Service Intl. Air Waybill.*

☒ FedEx Intl. Priority ☐ FedEx Intl. First — Available to select locations.

☐ _____ ☐ FedEx Intl. Economy — FedEx Envelope and FedEx Pak rate not available.

5 Packaging *These unique brown boxes with special pricing are provided by FedEx for FedEx Intl. Priority only.

☐ FedEx Envelope ☐ FedEx Pak ☐ FedEx Box ☐ FedEx Tube

☒ Other Cooler ☐ FedEx 10kg Box* ☐ FedEx 25kg Box*

6 Special Handling

☐ HOLD at FedEx Location ☐ SATURDAY Delivery — Available to select locations for FedEx Intl. Priority only.

7 Payment — Complete payment options for both transportation charges and duties and taxes.

Bill transportation charges to: — Enter FedEx Acct. No. or Credit Card No. below.

☐ Sender Acct. No. in Section 1 will be billed. ☐ Recipient ☒ Third Party ☐ Credit Card ☐ Cash/Check/Cheque

FedEx Use Only

FedEx Acct. No. 108 067 691

Credit Card No.

Credit Card Exp. Date

Bill duties and taxes to: — ALL shipments may be subject to Customs charges, which FedEx does not estimate prior to clearance. Enter FedEx Acct. No. below.

☐ Sender Acct. No. in Section 1 will be billed. ☐ Recipient ☒ Third Party

FedEx Acct. No. 108 067 691

8 Your Internal Billing Reference — First 24 characters will appear on invoice.

RE: St. Croix Alumina - 1109036

Enclosed are the results of analyses for samples received by the laboratory between 09/14/2011 and 09/23/2011. The signature below reflects the laboratory's approval of the reported results. If you have any questions concerning this report, please refer to Project Number 1109036 and contact John Birri by phone at 732-906-6886, or via Email at birri.john@epa.gov.

Sincerely,

John R. Bourbon
Chief, DESA/LB

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Region 2 Laboratory

Project:St. Croix Alumina - 1109036

Project Number: 1109036

Project Narrative:

The National Environmental Laboratory Accreditation Conference (NELAC) is a voluntary environmental laboratory accreditation association of State and Federal agencies. NELAC established and promoted a national accreditation program that provides a uniform set of standards for the generation of environmental data that are of known and defensible quality. The EPA Region 2 Laboratory is NELAC accredited. The Laboratory tests that are accredited have met all the requirements established under the NELAC Standards.

Condition Comments

The soil results are reported on a "dry-weight" basis.

Grain Size results are rounded to two significant figures, so the total percentage may not equal to exactly 100 percent. A Grain Size distribution graph was prepared for each sample and is available upon request.

The samples are predominantly sand and gravel fractions so the silt, clay and colloids fractions were reported together. The silt, clay and colloids fractions were small enough that error would be introduced by reporting them separately. As results the silt, clay and colloids fractions are reported as total for the following samples: 1109036-08, 1109036-10, 1109045-01, 1109045-04, 1109052-02, 1109052-05, 1109055-29, 1109055-33 & 1109055-35.

Due to organic material and the inherent variability associated with hydrometer analysis, the final results may have been adjusted to a final cumulative percent passing of 100 percent. These adjustments are generally to one fraction and are less than 3 percentage points. If a fraction is adjusted by more than 3 percentage points, it means that there was interference from the matrix and these data will be qualified with a "J" on the data report. The following samples were impacted with this scenario are 1109036-010, 1109036-033 and 1109036-035.

On September 19, 2011, the Laboratory received a total of 8 coolers of samples. Out of eight (8) coolers, 3 coolers of samples were non-conformance with sample temperature upon receipt. Thus, the following test results with the corresponding samples were qualified with "J":

Grain size samples that were received outside the temperature requirement, the data were not qualified with "J".

The TAL Metals, Mercury and Total Organic Carbon (TOC) results of the following samples: 1109055-33 through 1109055-38.

Data Qualifier(s):

U- The analyte was not detected at or above the Reporting Limit.
J- The identification of the analyte is acceptable; the reported value is an estimate.
K- The identification of the analyte is acceptable; the reported value may be biased high.
L- The identification of the analyte is acceptable; the reported value may be biased low.
NJ- There is presumptive evidence that the analyte is present; the analyte is reported as a tentative identification. The reported value is an estimate.

Reporting Limit(s):

The Laboratory was able to achieve the appropriate limits for each analyte requested.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 41746 **SDG No.: B98L4**
LABORATORY: ChemTech **SITE: St Croix Alumina**
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report and the CCS Semi- Automated Screening Results Report.

Tentatively Indentified Compounds (TICS) for BNA organic fraction is not validated.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Dorina Christina Alliu **Date:** October/19/2011

Peer Reviewer's Signature: _____ **Date:** ____/____/2011

Verified By: _____ **Date:** ____/____/2011

SDG# B98L4

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

The following semi-volatile water samples are outside primary extraction holding time criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B98L4, B4A18RX, B98W0RX

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following semi-volatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are not qualified.

2-Nitrophenol-d4 B98W0, B98W0RE
2-Nitrophenol, Isophorone

2,4-Dichlorophenol-d3 B98W0RE
1,2,4,5-Tetrachlorobenzene, 2,3,4,6-Tetrachlorophenol, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 4-Chloro-3-methylphenol, Hexachlorobutadiene, Pentachlorophenol

Nitrobenzene-d5 B98W0, B98W0RE
2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Acetophenone, Hexachloroethane, N-Nitroso-di-n-propylamine, N-Nitrosodiphenylamine, Nitrobenzene

4,6-Dinitro-2-methylphenol-d2 B98W0, B98W0RE, B98W8
4,6-Dinitro-2-methylphenol

The following semi-volatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds

are qualified UJ.

4-Chloroaniline-d4 B4A18, B4A18RE, B4A18RX, B98L4, B98L5, B98L7, B98W0, B98W0RE, B98W0RX
3,3'-Dichlorobenzidine, 4-Chloroaniline, Hexachlorocyclopentadiene

2-Chlorophenol-d4 B4A18, B4A18RE
2-Chlorophenol

Bis(2-Chloroethyl)ether-d8 B4A18, B4A18RE
2,2'-Oxybis(1-chloropropane), Bis(2-chloroethoxy)methane, Bis(2-chloroethyl)ether

Pyrene-d10 B4A18, B4A18RE
Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

4-Nitrophenol-d4 B4A18, B4A18RE, B98L4, B98L5, B98L7, B98T0, B98T6, B98W8, B98X0
2,4-Dinitrophenol, 2-Nitroaniline, 3-Nitroaniline, 4-Nitroaniline, 4-Nitrophenol

Nitrobenzene-d5 B4A18, B4A18RE
2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Acetophenone, Hexachloroethane, N-Nitroso-di-n-propylamine, N-Nitrosodiphenylamine, Nitrobenzene

Acenaphthylene-d8 B98L5
2-Chloronaphthalene, 2-Methylnaphthalene, Acenaphthene, Acenaphthylene, Naphthalene

Anthracene-d10 B4A18, B4A18RE
Anthracene, Atrazine, Hexachlorobenzene, Phenanthrene

Phenol-d5 B4A18, B4A18RE, B4A18RX, B98L4, B98L5, B98L7, B98T0, B98T6, B98W0, B98W0RE, B98W0RX, B98W8, B98X0
Benzaldehyde, Phenol

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of

samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A)

Method blank contamination:

No problems found for this qualification

B) Field or rinse blank contamination:

The following semi-volatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

Benzaldehyde B98W0, B98W0RE, B98W0RX

C) Trip blank contamination for VOA aqueous samples:

Not Applicable

D) Storage Blank associated with VOA samples only:

Not Applicable

.

E) Tics "R" rejected:

Tentatively Indentified Compounds (TICS) for BNA organic fraction is not validated.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The

continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be 0.05 in both initial and continuing calibrations. A value < 0.05 indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 30% and %D must be < 25%. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semi-volatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Indeno(1,2,3-cd)pyrene B4A18RE, B98W0RX, SBLK15

Pentachlorophenol B4A18, B4A18RE, B4A18RX, B98L4, B98L5, B98L7, B98T0, B98T6, B98W0, B98W0RE, B98W0RX, B98W8, B98X0, SBLK12, SBLK15

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than □30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within □ 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report

10. CONTRACT PROBLEMS NON-COMPLIANCE:

None

11. FIELD DOCUMENTATION:

No problems

12. OTHER PROBLEMS:

None

13. This package contains re-extractions, re-analyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

B4A18RE, B4A18RX, B98W0RE, B98W0RX

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 41746 **SDG No.: B5722**
LABORATORY: Chemtech **SITE: St. Croix Alumina**
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

Tentatively Identified Compounds (TICS) for BNA organic fractions are not validated. They are validated only at the specific request of the data user.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Raxa J. Shelley **Date:** October/19/ 2011

Peer Reviewer's Signature: _____ **Date:** ____/____/2011

Verified By: _____ **Date:** ____/____/2011

SDG# B5722

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Benzo(a)pyrene-d12 B4A15, B4A16, B4A17, B4A25
Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-cd)pyrene

Pyrene-d10 B4A15, B4A16, B4A17, B4A25
Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

4-Nitrophenol-d4 B4A15, B4A17, B5723, B5723MSD, B5726, B5728
2,4-Dinitrophenol, 2-Nitroaniline, 3-Nitroaniline, 4-Nitroaniline, 4-Nitrophenol

Dimethylphthalate-d6 B5726
1,1'-Biphenyl, Bis(2-ethylhexyl)phthalate, Butylbenzylphthalate, Caprolactam, Di-n-butylphthalate, Di-n-octylphthalate, Diethylphthalate, Dimethylphthalate

4,6-Dinitro-2-methylphenol-d2 B4A13, B4A15, B5726
4,6-Dinitro-2-methylphenol

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problems found for this qualification as per NFG/CCS report.

B) Field or rinse blank contamination:
No additional qualification due to rinse blank contamination.

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
Not applicable.

E) Tics "R" rejected:
Tentatively Identified Compounds (TICS) for BNA organic fractions are not validated. They are validated only at the specific request of the data user.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Indeno(1,2,3-cd)pyrene
B4A15, B4A16, B4A17, B5722, B5723, B5723MS, SBLK13

Pentachlorophenol
B4A13, B4A15, B4A16, B4A17, B4A20, B4A21, B4A22, B4A23, B4A24, B4A25, B5722, B5723, B5723MS, B5723MSD, B5726, B5728, SBLK13

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than □30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within □ 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

1. HOLDING TIME：

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problem found for this qualification.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problem found for this qualification.

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

No problem found for this qualification.

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problem found for this qualification.

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:
No problem found for this qualification.

B) Field or rinse blank contamination:
No problem found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

No problem found for this qualification.

7. COMPOUND IDENTIFICATION:

A) PCB Fraction:

The retention times of reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10ng/ml in the final sample extract.

No problem found for this qualification.

8. CONTRACT PROBLEMS NON-COMPLIANCE: No problem.

9. FIELD DOCUMENTATION: No problem.

10. OTHER PROBLEMS: None.

11. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.
None.

1,4-Dioxane-d8 B98W6
1,4-Dioxane

The following volatile samples have one or more DMC/SMC recovery values is less than the primary lower limit but greater than or equal to the expanded lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

trans-1,3-Dichloropropene-d4 B98L5, B98M1, B98M2, B98T0, B98T6, B98T8, B98W2, B98W8, B98X0
1,1,2-Trichloroethane, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not Applicable

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 1 times the blank contaminant level (2 times for common contaminants), the analytes are qualified as non-detects, "U".

The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

No problems found for this qualification.

C) Trip blank contamination for VOA aqueous samples:

No qualification was applied.

D) Storage Blank associated with VOA samples only:

No problems found for this qualification.

E) Tics "R" rejected:

Tentatively Indentified Compounds (TICS) for VOA organic fraction is not validated.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene.

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-two analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

The following volatile samples are associated with a CCV with relative response factors (RRF50) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane B98L5, B98L9, B98M0, B98M1, B98T2, B98T4, B98T6, B98W2, B98W4, B98W6, B98W8, B98X0, VBLK07

The following volatile samples are associated with an initial calibration with average relative response factors (mean RRFs) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified R.

1,4-Dioxane B98L5, B98L9, B98M0, B98M1, B98M2, B98T0, B98T2, B98T4, B98T6, B98T8, B98W0, B98W0DL, B98W2, B98W4, B98W6, B98W8, B98X0, VBLK03, VBLK07, VBLK08, VHBLK01

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. %D must be < 25%, < 40% for the poor performers, and < 50% for 1,4-Dioxane. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (> 90%), non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following volatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

1,1,2,2-Tetrachloroethane B98M2, B98T0, B98T8, VBLK08

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +200%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than □30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +200%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Volatile Fraction:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within □ 0.06 RRT units of the standard compound and have ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification.

10. CONTRACT PROBLEMS NON-COMPLIANCE:

None

11. FIELD DOCUMENTATION:

No problems found for this qualification.

12. OTHER PROBLEMS:

None

13. This package contains reextractions, reanalyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

B98W0DL

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 41746 **SDG No.: B98N2**
LABORATORY: ChemTech **SITE: St Croix Alumina**
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report and the CCS Semi- Automated Screening Results Report.

Tentatively Indentified Compounds (TICS) for BNA organic fraction is not validated.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Peer Reviewer's Signature: _____ **Date:** ____/____/2011

Verified By: _____ **Date:** ____/____/2011

SDG# B98N2

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

The following semi-volatile water samples are outside primary extraction holding time criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

B98R6RX, B98R1RX, B98R1RXRE, B98R6RXRE

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

The following semi-volatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Benzo(a)pyrene-d12 B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE
Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-cd)pyrene

Bis(2-Chloroethyl)ether-d8 B98R1, B98R1RE, B98R1RXRE, B98R6, B98R6RE, B98R6RX, B98R6RXRE
2,2'-Oxybis(1-chloropropane), Bis(2-chloroethoxy)methane, Bis(2-chloroethyl)ether

2,4-Dichlorophenol-d3 B98R1, B98R1RE, B98R6, B98R6RE, B98R6RX
1,2,4,5-Tetrachlorobenzene, 2,3,4,6-Tetrachlorophenol, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 4-Chloro-3-methylphenol, Hexachlorobutadiene, Pentachlorophenol

4-Nitrophenol-d4 B5721, B98L3, B98N2, B98P7, B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE, B98R6RX, B98R6RXRE, B98S1, B98S3, B98S9
2,4-Dinitrophenol, 2-Nitroaniline, 3-Nitroaniline, 4-Nitroaniline, 4-Nitrophenol

Dimethylphthalate-d6 B98R1, B98R1RE, B98R6, B98R6RE, B98R6RX, B98R6RXRE
1,1'-Biphenyl, Bis(2-ethylhexyl)phthalate, Butylbenzylphthalate, Caprolactam, Di-n-butylphthalate,

Di-n-octylphthalate, Diethylphthalate, Dimethylphthalate

4,6-Dinitro-2-methylphenol-d2 B98R1RE, B98R6, B98R6RE
4,6-Dinitro-2-methylphenol

Anthracene-d10 B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE, B98R6RX, B98R6RXRE
Anthracene, Atrazine, Hexachlorobenzene, Phenanthrene

4-Chloroaniline-d4 B98R1RX, B98R1RXRE, B98S1
3,3'-Dichlorobenzidine, 4-Chloroaniline, Hexachlorocyclopentadiene

2-Chlorophenol-d4 B98R1, B98R1RE, B98R6, B98R6RE, B98R6RX, B98R6RXRE
2-Chlorophenol

Pyrene-d10 B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE, B98R6RX, B98R6RXRE
Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

Fluorene-d10 B98R1, B98R1RE, B98R6, B98R6RE, B98R6RX, B98R6RXRE
4-Bromophenyl-phenylether, 4-Chlorophenyl-phenylether, Carbazole, Dibenzofuran, Fluorene

2-Nitrophenol-d4 B98R1, B98R1RE, B98R6, B98R6RE, B98R6RX, B98R6RXRE

2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Acetophenone, Hexachloroethane, N-Nitroso-di-n-propylamine, N-Nitrosodiphenylamine, Nitrobenzene

4-Methylphenol-d8 B98R6, B98R6RE, B98R6RXRE
2,4-Dimethylphenol, 2-Methylphenol, 4-Methylphenol

Acenaphthylene-d8 B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE, B98R6RXRE
2-Chloronaphthalene, 2-Methylnaphthalene, Acenaphthene, Acenaphthylene, Naphthalene

Phenol-d5 B5721, B98L3, B98N2, B98P7, B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE, B98R6RX, B98R6RXRE, B98R9, B98S1, B98S3, B98S9
Benzaldehyde, Phenol

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A)

Method blank contamination:

No problems found for this qualification

B) Field or rinse blank contamination:

No additional qualification was applied.

C) Trip blank contamination for VOA aqueous samples:

Not Applicable

D) Storage Blank associated with VOA samples only:

Not Applicable

.

E) Tics "R" rejected:

Tentatively Indentified Compounds (TICS) for BNA organic fraction is not validated.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification as per NFG/CCS report

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of

producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be 0.05 in both initial and continuing calibrations. A value < 0.05 indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 30% and %D must be < 25%. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

The following semi-volatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Non-detected compounds are not qualified.

Indeno(1,2,3-cd)pyrene B5721, B98L3, B98N2, B98P7, B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE, B98R6RX, B98R6RXRE, B98R9, B98S1, B98S3, B98S9, SBLK05, SBLK07, SBLK12

Pentachlorophenol B5721, B98L3, B98N2, B98P7, B98R1, B98R1RE, B98R1RX, B98R1RXRE, B98R6, B98R6RE, B98R6RX, B98R6RXRE, B98R9, B98S1, B98S3, B98S9, SBLK05, SBLK07, SBLK12

8. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the

positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification

9. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within □ 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report

10. CONTRACT PROBLEMS NON-COMPLIANCE:

None

11. FIELD DOCUMENTATION:

No problems

12. OTHER PROBLEMS:

None

13. This package contains re-extractions, re-analyses or dilutions. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

B98R6, B98R6RE, B98R6RXRE, B98R1, B98R1RE, B98R1RXRE.

Functional Guidelines for Evaluating Organic Analysis

1. HOLDING TIME：

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

No problems found for this qualification

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

No problems found for this qualification

4. Laboratory Control Samples (LCS):

The LCSs data provides information on the accuracy of the analytical method and laboratory performance. If LCS recoveries fell outside of the acceptable limits, qualifications were applied to the associated samples and compounds as shown below.

No problems found for this qualification

5. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Depending on the concentration of the analyte in the blank, the analytes are qualified as non-detects U.
The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

No problems found for this qualification.

B) Field or rinse blank contamination:

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

For the PCB fraction, if %RSD exceeds 20% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For opening CCV, or closing CCV that is used as an opening CCV for the next 12-hour period, if %D exceeds 15% for analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

For closing CCV, if %D exceeds 50% for all analytes and the two surrogates, qualify all associated positive results "J" and non-detects "UJ".

The following aroclor samples are associated with an opening or closing CCV with % Difference exceeding criteria. Detected compounds are qualified J. Non-detected compounds are qualified UJ.

Tetrachloro-m-xylene ABLK01, ABLK02, ALCS01, ALCS02, B5721, B98L3, B98N2, B98P7, B98R1, B98R6, B98R9, B98S1, B98S3, B98S3MS, B98S3MSD, B98S9

9. FIELD DOCUMENTATION: No problem.

10. OTHER PROBLEMS:
APM1-Percent moisture content of the following aroclor soil samples are greater than 70% but

less than or equal to 90%. Detected compounds are qualified J. Non detected compounds are qualified UJ.

-B5718

11. This package contains re-extracted, re-analyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

None.

Functional Guidelines for Evaluating Organic Analysis

CASE No.: 41746 **SDG Nos.: B56Z1**
LABORATORY: CHEM **SITE: St. CROIX ALUMINA**
ANALYSIS: BNA

DATA ASSESSMENT

The current SOP HW-35/SVOA (Revision 1) August 2007, USEPA Region II Data Validation SOP for Statement of Work SOM01.2 for evaluating organic data have been applied.

Data has been reviewed according to TDF specifications, the National Functional Guidelines Report # 3 and CCS Semi-Automated Screening Results Report.

Tentatively Identified Compounds (TICS) for BNA organic fractions are not validated. They are validated only at the specific request of the data user.

All data are valid and acceptable except those analytes rejected "R"(unusable). Due to the detection of QC problems, some analytes may have the "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detect) or "JN" (presumptive evidence for the presence of the material at an estimated value) flag. All action is detailed on the attached sheets.

The "R" flag means that the associated value is unusable. In other words, significant data bias is evident and the reported analyte concentration is unreliable.

Reviewer's Signature: Shobitha Capil **Date:** October / 17 / 2011

Peer Reviewer's Signature: _____ **Date:** / /2011

Verified By: _____ **Date:** / /2011

SDG# B56Z1

1. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following action was taken in the samples and analytes shown due to excessive holding time.

No problems found for this qualification.

2. SURROGATES

All samples are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below.

BDSS15-The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified J. Nondetected compounds are qualified UJ.
-B56Z1, B56Z9, B5715, B5724, B5727, B5727RE, B5727RX, B5727RXRE, B5729

- **Benzo(a)pyrene-d12** B56Z1, B5729
-Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-cd)pyrene

- **2-Chlorophenol-d4** B5727RE, B5727RX, B5727RXRE
-2-Chlorophenol

- **Pyrene-d10** B56Z1, B56Z9, B5729
-Benzo(a)anthracene, Chrysene, Fluoranthene, Pyrene

- **Fluorene-d10** B56Z1, B5727RE, B5729
-4-Bromophenyl-phenylether, 4-Chlorophenyl-phenylether, Carbazole, Dibenzofuran, Fluorene

- **2-Nitrophenol-d4** B5727, B5727RE, B5727RX, B5727RXRE
-2-Nitrophenol, Isophorone

- **2,4-Dichlorophenol-d3** B5727, B5727RE, B5727RX, B5727RXRE
-1,2,4,5-Tetrachlorobenzene, 2,3,4,6-Tetrachlorophenol, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 4-Chloro-3-methylphenol, Hexachlorobutadiene, Pentachlorophenol

- **Dimethylphthalate-d6** B56Z1, B5727, B5727RE
-1,1'-Biphenyl, Bis(2-ethylhexyl)phthalate, Butylbenzylphthalate, Caprolactam, Di-n-butylphthalate, Di-n-octylphthalate, Diethylphthalate, Dimethylphthalate

- **4-Nitrophenol-d4** B5715, B5724, B5727, B5727RE, B5727RX, B5727RXRE
-2,4-Dinitrophenol, 2-Nitroaniline, 3-Nitroaniline, 4-Nitroaniline, 4-Nitrophenol

- **4,6-Dinitro-2-methylphenol-d2** B5727, B5727RE, B5727RX, B5727RXRE
-4,6-Dinitro-2-methylphenol

3. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for additional qualification of data.

Not applicable.

4. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination, which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the sample shown were qualified with "U" for these reasons:

A) Method blank contamination:

BLB8-The following semi volatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the concentration criteria. Detected compounds are qualified U. Non detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.
-B5715, B5718, B5719, B5720, B5724, B5727

- **Phenol** B5715, B5718, B5719, B5720, B5724, B5727

B) Field or rinse blank contamination:
Not applicable.

C) Trip blank contamination for VOA aqueous samples:
Not applicable.

D) Storage Blank associated with VOA samples only:
Not applicable.

E) Tics "R" rejected:
Tentatively Identified Compounds (TICS) for BNA organic fractions are not validated. They are validated only at the specific request of the data user.

5. MASS SPECTROMETER TUNING:

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is (BFB) Bromofluorobenzene and for semi-volatiles Decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error, all associated data will be classified as unusable "R".

No problems found for this qualification.

6. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for the Target Compound List (TCL) must be ≥ 0.05, and ≥ 0.01 for the twenty-five analytes with poor response in both the initial and continuing calibrations. A value < 0.05, or < 0.01 for the poor performers indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound will be rejected "R".

No problems found for this qualification as per NFG/CCS report.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 20%, and < 40% for the poor performers. % D must be < 25%, and < 40% for the poor performers. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detects data may be qualified "R".

The following analytes in the sample shown were qualified for %RSD and %D:

BC5-The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified J. Nondetected compounds are not qualified.
-B56Z1, B56Z3, B56Z4, B56Z5, B56Z8, B56Z9, B5715, B5716, B5717, B5718, B5719, B5720, B5724, B5725, B5727, B5727RE, B5727RX, B5727RXRE, B5729, SBLK08, SBLK11, SBLK13
- **Indeno(1,2,3-cd)pyrene** SSTD00564
- **Pentachlorophenol** SSTD00564, SSTD00582
-B56Z1, B56Z3, B56Z4, B56Z5, B56Z8, B56Z9, B5715, B5716, B5717, B5718, B5719, B5720, B5724, B5725, B5727, B5727RE, B5727RX, B5727RXRE, B5729, SBLK08, SBLK11, SBLK13

7. INTERNAL STANDARDS PERFORMANCE GC/MS:

Internal standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than □30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgment to determine either partial or total rejection of the data for that sample fraction.

No problems found for this qualification.

8. COMPOUND IDENTIFICATION:

A) Semi-Volatile Fractions:

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within □ 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

No problems found for this qualification as per NFG/CCS report.

9. CONTRACT PROBLEMS NON-COMPLIANCE:

BNA:

Per the SOW, the analysis of B5727RE and B5727RXRE is not required.

BNA:

Initial calibration:

Initial calibration percent relative standard deviation (%RSD) is outside criteria for the following analytes:

- **Indeno(1,2,3-cd)pyrene**
- **Pentachlorophenol**

10. FIELD DOCUMENTATION:

11. OTHER PROBLEMS:

BPM1-Percent moisture content of the following semi volatile soil samples are greater than or equal to 70% but less than or equal to 90% . Detected compounds are qualified J. Non detected compounds are qualified UJ.

-B5718

12. This package contains re-extracted, reanalyzed or dilution runs. Upon reviewing the QA results, the following Form 1(s) are identified NOT to be used.

B5727RE, B5727RX, B5727RXRE

Laboratory: **National Air and Radiation Environmental Laboratory**
Delivery Group : **1100224**

INTRODUCTION

Weston Solutions, Inc. collected and shipped twenty (20) waste samples in one cooler as Chain of Custody (COC) # 2-092711-140743-0023; these sample analyses are reported by NAREL as Delivery Group 1100224. The samples were collected between 9/15/2011 and 9/16/2011 as part of a preliminary investigation. Data validation activities were performed to the extent feasible, in accordance with the "*USACE Kansas City and St. Louis District Radionuclide Data Quality Evaluation Guidance for Alpha and Gamma Spectroscopy, Revision 01, June 2004*." The samples associated with this Delivery Group are as follows:

Sample_ID	Client_ID
B1.11274B	RMA-WST01A
B1.11275C	RMA-WST02A
B1.11276D	RMA-WST03A
B1.11277E	RMA-WST04A
B1.11278F	RMA-WST06A
B1.11279G	RMA-WST07A
B1.11280Z	RMA-WST09A

Sample_ID	Client_ID
B1.11281A	RMA-WST09B
B1.11282B	RMA-WST11A
B1.11283C	RMA-WST12A
B1.11284D	RMA-WST14A
B1.11285E	RMA-WST14B
B1.11286F	RMA-WST15A
B1.11287G	RMA-WST16A

Sample_ID	Client_ID
B1.11288H	RMA-WST16B
B1.11289J	RMA-WST17A
B1.11290B	RMA-WST17B
B1.11291C	RMA-WST18A
B1.11292D	RMA-WST19A
B1.11293E	RMA-WST20A

All of the samples on the COC could be related to samples listed in the reports for the Delivery Group, and all samples in the delivery group came from the COC. The following information was used to validate the analytical results, where feasible:

- Data Completeness/Sample Integrity
- Holding Time
- Calibration
- Tracer Analysis (Alpha Spec only)
- Quality Control Samples
- Blanks (Lab and Field)
- Laboratory Control Sample (LCS)
- Duplicates (Laboratory and Field)
- Matrix Spike (Alpha Spec only)
- Quantitation and Detection Limits
- Chemical Separation Specificity (Alpha Spec only)
- Target Radionuclide List Identification (Gamma Spec only)
- Result Verification

DATA COMPLETENESS/SAMPLE INTEGRITY – The data package included a comprehensive case narrative, and sample results. However no result report was provided for gross alpha and beta, only information in an EDD. I was instructed not to review the gross alpha and beta data. Raw data was provided in the form of pdf files for the gamma spectroscopy analyses only. Raw data, in the form of a complete EDD was not provided, and such an EDD is required to recalculate results in a reasonable amount of time. In addition, the NAREL written procedures do not include the equations used to calculate results, so recalculation was not possible for more than one reason.

There was nothing in the laboratory case narrative to suggest that samples were received in a compromised condition (e.g. not intact, in wrong sample containers or showing evidence of tampering). COC paperwork was available to review.

HOLDING TIME – All samples were analyzed within 180 days from sample collection.

CALIBRATION

Alpha Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

Gamma Spectroscopy – From the data provided it cannot be determined how frequently energy, efficiency, and background are determined. However the PDFs of the raw data did allow a more detailed examination than would otherwise have been possible. The energy calibration documentation of the gamma spec system was spot checked and appears to be acceptable.

TRACER ANALYSIS

Alpha Spectroscopy (isotopic thorium, isotopic uranium)
Tracer analysis was performed on each sample to determine radiochemical recovery (yield) for alpha spectroscopy. The tracer recovery criteria, as per the USACE Data Quality Evaluation Guidance, are 50-100%. The tracer recovery criteria were met, with the exceptions listed below. Therefore, isotopic thorium results for this sample by alpha spectroscopy for this sample were qualified estimated "J" (high uncertainty) due to low tracer recovery:

Sample_ID	Client_ID	Procedure	Yield%
B1.11279G	RMA-WST07A	NAREL TH-EICHROM	46.1

QUALITY CONTROL SAMPLES

Blanks (Field)

There were no field blanks associated with this sample set.

Blanks (Laboratory):

Alpha Spectroscopy - One (1) blank was analyzed per matrix for every twenty (20) samples.

Thorium Isotopes: No activity was reported in the thorium blank that exceeded the 2σ uncertainty, so no further investigation of the blanks was required.

Uranium Isotopes: No activity was reported in the thorium blank that exceeded the 2σ uncertainty, so no further investigation of the blanks was required.

Gamma Spectroscopy - One (1) soil blank was analyzed for every twenty (20) samples. No activity was reported in the gamma spectroscopy blank that exceeded the 2σ uncertainty, so no further investigation of the blanks was required.

Laboratory Control Samples (LCS):

Gamma Spectroscopy - The LCS was performed and the default control limits as specified in the USACE Data Quality Evaluation Guidance have been met.

Alpha Spectroscopy –

Thorium Samples:
The LCS was performed and the default control limits of 70-130%, as specified in the USACE Data Quality Evaluation Guidance have been met.

Uranium Samples:
The LCS was performed and the default control limits of 70-130%, as specified in the USACE Data Quality Evaluation Guidance have been met.

Replicates (Field):

No sample pair were identifiable by the validator as field replicates from review of the sample and analytical documentation. The review procedures do not require samples to carry qualifiers based on poor agreement of field replicates, thus no qualifiers were assigned based on lack of an identifiable field replicate.

Duplicates (Laboratory):

Alpha Spectroscopy –

Thorium Samples:
One (1) replicate was analyzed per matrix for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met in this delivery group. The Normalized Absolute Difference (NAD) was less than 1.96 for all results.

Uranium Samples:
One (1) replicate was analyzed per matrix for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met in this delivery group. The Normalized Absolute Difference (NAD) was less than 1.96 for all results.

Gamma Spectroscopy –
One (1) soil replicate was analyzed for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met. The Normalized Absolute Difference (NAD) was less than 1.96 for all results where there was data to support the calculation. Some analytes by gamma spectroscopy were qualified "Q" meaning "duplicate data not available for this analyte".

Matrix Spike:

Alpha Spectroscopy – Recoveries were determined on a sample by sample basis; there was no matrix spike.

QUANTITATION AND DETECTION LIMITS

Gamma Spectroscopy sample results were reported in pCi/g and Alpha Spectroscopy results were reported in pCi/g.

Alpha Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Results less than the MDA were qualified with a U.
- The laboratory narrative did not mention problems with spectra of samples having broadened peaks.

Gamma Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Laboratory censored data and did not report values less than MDA. When blank results exceeded 2σ, the NAD of sample and blank was calculated and results were qualified with a Q where appropriate.

CHEMICAL SEPARATION SPECIFICITY

Alpha Spectroscopy – No data was provided for this delivery group that could be used to evaluate chemical separation specificity.

TARGET RADIONUCLIDE LIST IDENTIFICATION

Gamma Spectroscopy – The raw gamma spec data sheets were reviewed for samples 11274B and 11275C form the Delivery Group. Those raw data sheets showed the energy or energies used to identify each of the reported isotopes and then summed the counts and reported the "average" result, which was used as the final reported concentration of the specified isotope. To verify compliance with the +- 2 keV energy range criterion required by the USACE in section X.C.1, one of the individual energies listed for each isotope was compared to the energies listed in the ICRP Publication for the specified isotope to determine if there was a corresponding characteristic energy. In all, seven isotopes (Bi-214, Ra-226, Pb-212, Th-228, Pa-234m, U-235, and Pb-214) were reviewed in this way for each of the two samples, and in each case the energies shown on the raw data report were compliant.

The narrative in the paper laboratory report points out that the spectral interference of Ra-226 and U-235. As a consequence, the results for these isotopes are coded R (reject) where the activity exceeded the MDC, and U (non-detect) where the MDC was not exceeded.

RESULT VERIFICATION –

Alpha Spectroscopy –

No data was provided for samples in this delivery group that could be used to verify results or check for transcription errors.

Gamma Spectroscopy –

The result values in the basic EDD supplied by the laboratory agreed with those in the paper report and in the raw data supplied in the PDF. The sample result and uncertainty columns were checked. For the two samples reviewed, the uncertainty values listed in the raw data PDF column labeled "+- 2.00 sigma" did not correlate with values in the paper report column labeled "+- 2σ uncertainty". Only three of the 24 values listed for uncertainty were considered to be the same.

The uncertainty value in the paper lab report is always greater than or equal to the value in the raw data. No equations are provided in the lab procedure, but the lab procedure does state that the reported uncertainty is the total propagated uncertainty (TPU). It is plausible that the uncertainties listed in the raw data PDF are based on counting statistics only while those in the paper report are TPU.

The radionuclide ratios of Ra-228 (gamma spectroscopy) to Th-228 (alpha spectroscopy) in each applicable sample have met the acceptable range of 0.5 to 2.

COMMENTS/PROBLEMS

- No field replicate pair was recognized.
- Sample B1.11279G (isotopic thorium) was qualified due to a low recovery.
- Some gamma spectroscopy results were qualified Q because laboratory duplicate results for that isotope were not reported.
- Sometimes the result calculated from the EDD was slightly different than the result reported in the paper report. The difference is notable but not alarming. Intermediate data that the lab used could have included more decimal places than the EDD I was provided.

DATA ASSESSMENT – To the extent feasible the overall precision and accuracy, as determined by QA/QC checks, including detector calibration, tracer analysis and quality control samples (i.e., blanks, LCS, and duplicates) were found to be valid and acceptable. Due to various QC problems some analytes were qualified "J" (estimated) or "Q" (no duplicate result available). All action is detailed above.

All of the samples on the COC could be related to samples listed in the reports for the Delivery Group, and all samples in the delivery group came from the COC.

The following information was used to validate the analytical results, where feasible:

- Data Completeness/Sample Integrity
- Holding Time
- Calibration
- Tracer Analysis (Alpha Spec only)
- Quality Control Samples
  - Blanks (Lab and Field)
  - Laboratory Control Sample (LCS)
    - Duplicates (Laboratory and Field)
    - Matrix Spike (Alpha Spec only)
- Quantitation and Detection Limits
- Chemical Separation Specificity (Alpha Spec only)
- Target Radionuclide List Identification (Gamma Spec only)
- Result Verification

DATA COMPLETENESS/SAMPLE INTEGRITY – The data package included a comprehensive case narrative, and sample results. However no result report was provided for gross alpha and beta, only information in an EDD. I was instructed not to review the gross alpha and beta data. Raw data, in the form of a complete EDD was not provided, and such an EDD is required to recalculate results in a reasonable amount of time. In addition, the NAREL written procedures do not include the equations used to calculate results, so recalculation was not possible for more than one reason.

There was nothing in the laboratory case narrative to suggest that samples were received in a compromised condition (e.g. not intact, in wrong sample containers or showing evidence of tampering). COC paperwork was available to review. The samples that were validated for this Delivery Group appeared to be the ones collected from the site.

HOLDING TIME – All samples were analyzed within the specified holding time of 180 days from sample collection.

CALIBRATION

Alpha Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

Gamma Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

TRACER ANALYSIS

Alpha Spectroscopy (isotopic uranium and thorium)
Tracer analysis was performed on each sample to determine radiochemical recovery (yield) for alpha spectroscopy. The tracer recovery criteria, as per the USACE Data Quality Evaluation Guidance, are 50-100%. The tracer recovery criteria were met and no results were qualified due to low or high yield.

QUALITY CONTROL SAMPLES

Blanks (Field)

There were no field balnks for this delivery group.

Blanks (Laboratory):

Alpha Spectroscopy - One (1) blank was analyzed per matrix for every twenty (20) samples.

Uranium Isotopes: No U-235 or U-238 activity was reported in the uranium blank that exceeded the 2σ uncertainty. Uranium-234 activity was reported in the blank at levels that exceeded the 2σ uncertainty, however the NAD of sample and blank was well above 2.58 so no results required qualification.

Thorium Isotopes: No activity was reported in the thorium blank that exceeded the 2σ uncertainty.

Gamma Spectroscopy - One (1) soil blank was analyzed for every twenty (20) samples. No activity was reported in the blank that exceeded the 2σ uncertainty.

Laboratory Control Samples (LCS):

Gamma Spectroscopy - The LCS was performed and the default control limits as specified in the USACE Data Quality Evaluation Guidance have been met.

Alpha Spectroscopy –

Uranium and Thorium Samples:
The LCS was performed and the default control limits of 70-130%, as specified in the USACE Data Quality Evaluation Guidance have been met.

Replicates (Field):

The field replicate pair for this Delivery Group was:

Field Dup ID	Field Sample ID
ADP-WST41C	ADP-WST41B

Gamma Spectroscopy and Alpha Spectroscopy
Performance on field replicates was acceptable with all samples having a NAD of result and replicate result < 1.96. As discussed in the Laboratory Duplicates – Gamma Spectroscopy section, it was not possible in every instance to calculate a NAD.

Duplicates (Laboratory):

Alpha Spectroscopy –

Uranium Samples and Thorium Samples:
One (1) replicate was analyzed per matrix for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met in this delivery group. The Normalized Absolute Difference (NAD) was less than 1.96 for all results.

Gamma Spectroscopy - One (1) soil replicate was analyzed for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met. The Normalized Absolute Difference (NAD) was less than 1.96 for all results where there was data to support the calculation. The following analytes by gamma spectroscopy were qualified "Q" meaning "duplicate data not available for this analyte".

Procedure	Analyte	Qualifier
NAREL GAM-01	Pa234m	Q
NAREL GAM-01	Pb210	Q
NAREL GAM-01	Ra223	Q
NAREL GAM-01	Rn219	Q
NAREL GAM-01	Rn220	Q
NAREL GAM-01	Th227	Q
NAREL GAM-01	Th228	Q
NAREL GAM-01	Th234	Q

Matrix Spike:

Alpha Spectroscopy – Recoveries were determined on a sample by sample basis; there was no matrix spike.

QUANTITATION AND DETECTION LIMITS

Gamma Spectroscopy sample results were reported in pCi/g and Alpha Spectroscopy results were reported in pCi/g.

Alpha Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Results less than the MDA were qualified with a U.
- The laboratory narrative mentioned problems with spectra of samples having broadened peaks and this led to certain uranium and thorium results being J qualified.

Gamma Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Laboratory censored data and did not report values less than MDA. When blank results exceeded 2σ, the NAD of sample and blank was calculated and results were qualified with a Q where appropriate.

CHEMICAL SEPARATION SPECIFICITY

Alpha Spectroscopy – No data was provided for this delivery group that could be used to evaluate chemical separation specificity.

TARGET RADIONUCLIDE LIST IDENTIFICATION

Gamma Spectroscopy – No data was provided for this delivery group that could be used to judge energy calibration. The laboratory narrative discusses the overlap of U-235 and Ra-226 gamma rays; leading to overestimates of the concentrations of both. The radionuclides were assigned a U when they were not detected or an R where they were detected by gamma spectroscopy.

RESULT VERIFICATION – No data was provided for samples in this delivery group that could be used to verify results or check for transcription errors.

The radionuclide ratios of Ra-228 (gamma spectroscopy) to Th-228 (alpha spectroscopy) fell within the range of 0.5 to 2, and are considered reasonable.

COMMENTS/PROBLEMS

- Sometimes the result calculated from the EDD was slightly different than the result reported in the paper report. The difference is notable but not alarming. Intermediate data that the lab used could have included more decimal places than the EDD I was provided.
- Uranium-234 activity was detected in the media blank.
- Some isotopic uranium results by alpha spectroscopy were qualified due to peak broadening.
- Some isotopic thorium results by alpha spectroscopy were qualified due to peak broadening.
- Some gamma spectroscopy results were qualified because laboratory duplicate results for that isotope were not reported.
- The laboratory narrative reports interference between U-235 and Ra-226 by gamma spectroscopy.

DATA ASSESSMENT – To the extent feasible the overall precision and accuracy, as determined by QA/QC checks, including detector calibration, tracer analysis and quality control samples (i.e., blanks, LCS, and duplicates) were found to be valid and acceptable. Due to various QC problems some analytes were qualified "J" (estimated), "Q" (no duplicate result available), or "R" (rejected). All action is detailed above.

DATA VALIDATOR: Rick Haaker, CHP March 4, 2012.

B1.11630B	BG-S16A
B1.11631C	LCP-SD33
B1.11632D	RMA-WST13A
B1.11633E	RMA-WST13B

Not all of the samples on the COCs were included in delivery group 1100226. But all samples in the delivery group came from the two COC forms.

The following information was used to validate the analytical results, where feasible:

- Data Completeness/Sample Integrity
- Holding Time
- Calibration
- Tracer Analysis (Alpha Spec only)
- Quality Control Samples
    - Blanks (Lab and Field)
    - Laboratory Control Sample (LCS)
        - Duplicates (Laboratory and Field)
        - Matrix Spike (Alpha Spec only)
- Quantitation and Detection Limits
- Chemical Separation Specificity (Alpha Spec only)
- Target Radionuclide List Identification (Gamma Spec only)
- Result Verification

DATA COMPLETENESS/SAMPLE INTEGRITY – The data package included a comprehensive case narrative, and sample results. However no result report was provided for gross alpha and beta, only information in an EDD. I was instructed not to review the gross alpha and beta data. Raw data, which are required to perform a complete data validation were not available. In addition, the NAREL written procedures do not include the equations used to calculate results, so recalculation was not possible for more than one reason. There was nothing in the laboratory case narrative to suggest that samples were received in a compromised condition (e.g. not intact, in wrong sample containers or showing evidence of tampering). COC paperwork was available to review.

HOLDING TIME – All samples were analyzed within 180 days from sample collection.

CALIBRATION

Alpha Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

Gamma Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

TRACER ANALYSIS

Alpha Spectroscopy (isotopic uranium and thorium)

Tracer analysis was performed on each sample to determine radiochemical recovery (yield) for alpha spectroscopy. The tracer recovery criteria, as per the USACE Data Quality Evaluation Guidance, are 50-100%. The tracer recovery criteria were met with the following exception for isotopic thorium, and

those results were J qualified for high uncertainty, except for Th-227, which was qualified as a non-detect (U).

Sample_ID	Client_ID	Procedure
B1.11631C	LCP-SD33	NAREL TH-EICHROM

QUALITY CONTROL SAMPLES

Blanks (Field)

There were no field blanks associated with this sample set.

Blanks (Laboratory):

Alpha Spectroscopy - One (1) blank was analyzed per matrix for every twenty (20) samples. Activity was reported in the blanks at values that exceeded their uncertainty at 2σ as indicated below. As a result, twenty-three results were qualified due to having a normalized absolute difference (NAD) of sample and blank < 2.58. Two were non-detects (U) and 21 were assigned high uncertainty (J).

Procedure	Analyte
NAREL TH-EICHROM	Th228
NAREL TH-EICHROM	Th230
NAREL U-EICHROM	U234

Gamma Spectroscopy - One (1) soil blank was analyzed for every twenty (20) samples. No activity was reported in the media blank that exceeded the 2σ uncertainty, so no further investigation of the blanks was required.

Laboratory Control Samples (LCS):

One (1) soil LCS was analyzed for every twenty (20) samples.

Gamma Spectroscopy - The LCS was performed and the default control limits as specified in the USACE Data Quality Evaluation Guidance have been met.

Alpha Spectroscopy – The LCS was performed and the default control limits as specified in the USACE Data Quality Evaluation Guidance have been met.

Replicates (Field):

The field replicates for this delivery group are provided below. Poor agreement between samples and their field replicates is notable, but does not result in assignment of qualifiers.

Field Dup ID	Field Sample ID
RMA-WST01C	RMA-WST01B

Gamma Spectroscopy:
NAD values for replicate values for Ra-226 and U-235 were between were between 1.96 and 3.92. This would be considered poor agreement, but because of the known spectral interference of the gamma rays from these isotopes, the results are rejected when detected. Otherwise gamma spectroscopy replicate performance was acceptable.

Alpha Spectroscopy
Poor agreement was observed in the field replicates as indicated below. However, this did not result in assignment of specific qualifiers.

Del_Group	Procedure	Analyte	NAD
1100226	NAREL TH-EICHROM	Th228	>1.96
1100226	NAREL TH-EICHROM	Th230	>1.96
1100226	NAREL TH-EICHROM	Th232	> 3.92
1100226	NAREL U-EICHROM	U234	> 1.96
1100226	NAREL U-EICHROM	U238	>1.96

Duplicates (Laboratory):

Alpha Spectroscopy – One (1) soil replicate was analyzed for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met. The Normalized Absolute Difference (NAD) of sample and duplicate results was less than 1.96 for all uranium and thorium analytes.

Gamma Spectroscopy - One (1) soil replicate was analyzed for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met. The Normalized Absolute Difference (NAD) was less than 1.96 for all results where there was data to support the calculation. The following analytes by gamma spectroscopy were qualified "Q" meaning "duplicate data not available for this analyte".

Analyte	Qualifier
Ra228	Q

Matrix Spike:

Alpha Spectroscopy – Recoveries were determined on a sample by sample basis; there was no matrix spike.

QUANTITATION AND DETECTION LIMITS

Gamma Spectroscopy sample results were reported in pCi/g and Alpha Spectroscopy results were reported in pCi/g.

Alpha Spectroscopy – Results less than the MDA were qualified with a U.

Gamma Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Laboratory censored data and did not report values less than MDA. When blank results exceeded 2σ, the NAD of sample and blank was calculated and results were qualified with a Q where appropriate.

CHEMICAL SEPARATION SPECIFICITY

Alpha Spectroscopy - No data was provided for this delivery group that could be used to evaluate chemical separation specificity.

TARGET RADIONUCLIDE LIST IDENTIFICATION

Gamma Spectroscopy – No data was provided for this delivery group that could be used to judge energy calibration. The laboratory narrative discusses the overlap of U-235 and Ra-226 gamma rays; leading to overestimates of the concentrations of both. The radionuclides were assigned a U when they were not detected or an R where they were detected by gamma spectroscopy.

RESULT VERIFICATION – No raw data was provided for samples in this delivery group that could be used to recalculate results from scratch. In addition the written procedures provided by the laboratory did not include the equations used. No transcription errors were noticed.

COMMENTS/PROBLEMS

- Some gamma spectroscopy results were qualified Q because laboratory duplicate results for that isotope were not reported.
- Agreement between the field replicates was not good for alpha spectroscopy analytes.
- U-234, Th-228 and Th-230 were reported in the laboratory blank at greater than 2σ.
- Thorium tracer recovery was low.
- Sometimes the result calculated from the EDD was slightly different than the result reported in the paper report. The difference is notable but not alarming. Intermediate data that the lab used could have included more decimal places than the EDD I was provided.

Project Site: St Croix Alumina Processing Plant, St. Croix, Virgin Island
Delivery Group 1100226

DATA ASSESSMENT –

Gamma Spectroscopy: To the extent feasible the overall precision and accuracy, as determined by QA/QC checks, including detector calibration, tracer analysis and quality control samples (i.e., blanks, LCS, and duplicates) were found to be valid and acceptable. Due to various QC problems some analytes were qualified "J" (estimated) or "Q" (no duplicate result available). All action is detailed above.

Reported alpha spectroscopy data was rejected for reasons stated above.

DATA VALIDATOR: Rick Haaker, CHP March 6, 2012.

Project Site: St Croix Alumina Processing Plant, St. Croix, Virgin Island
Sample Matrix: Waste, Sediment

INTRODUCTION

Weston Solutions, Inc. collected and shipped samples under 3 chain of custody forms in three coolers. Chain of Custody forms were 2-092011-124541-0029, 2-092011-133530-0031, and 2-092111-130009-0037. Some (20), but not all, of these samples were analysed and reported by NAREL as Delivery Group 1100227. The samples were collected between 9/14/2011 and 9/21/2011. The samples were collected from the site as part of a preliminary investigation. Data validation activities were performed to the extent feasible, in accordance with the "*USACE Kansas City and St. Louis District Radionuclide Data Quality Evaluation Guidance for Alpha and Gamma Spectroscopy, Revision 01, June 2004*." The samples associated with this Delivery Group are as follows:

Sample_ID	Client_ID
B1.11634F	RMA-WST20B
B1.11635G	RMA-WSTR01A
B1.11636H	RMA-WSTR02A
B1.11637J	RMS-SD45
B1.11638K	UCP-SD35

Sample_ID	Client_ID
B1.11639L	UCP-SD37
B1.11640D	UCP-SD39

B1.11650F	RMA-WST11C

Sample_ID	Client_ID
B1.11651G	RMA-WST19B
B1.11652H	RMB-WST22A

Sample_ID	Client_ID
B1.11653J	RMB-WST22B

The following information was used to validate the analytical results, where feasible:

- Data Completeness/Sample Integrity
- Holding Time
- Calibration
- Tracer Analysis (Alpha Spec only)
- Quality Control Samples
  - Blanks (Lab and Field)
  - Laboratory Control Sample (LCS)
    - Duplicates (Laboratory and Field)
    - Matrix Spike (Alpha Spec only)
- Quantitation and Detection Limits
- Chemical Separation Specificity (Alpha Spec only)
- Target Radionuclide List Identification (Gamma Spec only)
- Result Verification

DATA COMPLETENESS/SAMPLE INTEGRITY – The data package included a comprehensive case narrative, and sample results. However no result report was provided for gross alpha and beta, only information in an EDD. I was instructed not to review the gross alpha and beta data. Raw data, which are required to perform a complete data validation were not available. In addition, the NAREL written procedures do not include the equations used to calculate results, so recalculation was not possible for more than one reason.

There was nothing in the laboratory case narrative to suggest that samples were received in a compromised condition (e.g. not intact, in wrong sample containers or showing evidence of tampering). COC paperwork was available to review. The samples that were validated for this Delivery Group appeared to be the ones collected from the site.

HOLDING TIME – All samples were analyzed within 180 days from sample collection.

CALIBRATION

Alpha Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

Gamma Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

TRACER ANALYSIS

Alpha Spectroscopy (isotopic uranium and thorium)

Tracer analysis was performed on each sample to determine radiochemical recovery (yield) for alpha spectroscopy. The tracer recovery criteria, as per the USACE Data Quality Evaluation Guidance, are 50-100%. The tracer recovery criteria were met and no results were qualified due to low or high yield.

QUALITY CONTROL SAMPLES

Blanks (Field)

There were no field blanks associated with this sample set.

Blanks (Laboratory):

Alpha Spectroscopy - One (1) blank was analyzed per matrix for every twenty (20) samples.

Uranium Isotopes: uranium activity was reported in the uranium blank that exceeded the 2σ uncertainty. Uranium-234 activity was reported in the blank at levels that exceeded the 2σ uncertainty, however the NAD of sample and blank was well above 2.58 for all samples, so no results required qualification.

Thorium Isotopes: thorium-228 activity was reported in the thorium blank that exceeded the 2σ uncertainty. However the NAD of sample and blank was well above 2.58 for all samples, so no results required qualification.

Gamma Spectroscopy - One (1) soil blank was analyzed for every twenty (20) samples. Lead-212 was reported in the media blank at levels that exceeded the 2σ uncertainty. All lead-212 results were assigned a J (high uncertainty) qualifier because the NAD of samples and blank were less than 2.58. No activity was reported in the media blank that exceeded the 2σ uncertainty, so no further investigation of the blanks was required.

Laboratory Control Samples (LCS):

Gamma Spectroscopy - The LCS was performed and the default control limits as specified in the USACE Data Quality Evaluation Guidance have been met.

Alpha Spectroscopy –

Isotopic Uranium: The LCS was performed and the default control limits of 70 – 130% as specified in the USACE Data Quality Evaluation Guidance have been met.

Isotopic Thorium: The LCS was performed and the default control limits of 70 – 130% as specified in the USACE Data Quality Evaluation Guidance have been met.

Replicates (Field):

The following pair of samples are not accepted as valid field replicates. Although they appear to be field duplicates, they were not analyzed in the same batch or delivery group.

Field Dup ID	Field Sample ID
RMA-WST11C	RMA-WST11A

Duplicates (Laboratory):

Alpha Spectroscopy – One (1) soil replicate was analyzed for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met. The Normalized Absolute Difference (NAD) was less than 1.96 for all results. So, no samples were qualified due to poor agreement between sample and laboratory replicate.

Gamma Spectroscopy - One (1) soil replicate was analyzed for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met. The Normalized Absolute Difference (NAD) was less than 1.96 for all results where there was data to support the calculation. The following analytes by gamma spectroscopy were qualified "Q" meaning "duplicate data not available for this analyte".

Del_Group	Procedure	Analyte	Qualifier
1100227	NAREL GAM-01	Pb210	Q
1100227	NAREL GAM-01	Ra223	Q
1100227	NAREL GAM-01	Rn220	Q

Matrix Spike:

Alpha Spectroscopy – Recoveries were determined on a sample by sample basis; there was no matrix spike.

QUANTITATION AND DETECTION LIMITS

Gamma Spectroscopy sample results were reported in pCi/g and Alpha Spectroscopy results were reported in pCi/g.

Gamma Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Laboratory censored data and did not report values less than MDA. When blank results exceeded 2σ, the NAD of sample and blank was calculated and results were qualified with a Q where appropriate.

Alpha Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following: Results less than the MDA were qualified with a U.

- Isotopic Uranium- The laboratory narrative did not mention problems with spectra of samples having broadened peaks.
- Isotopic Thorium- The laboratory narrative did not mention problems with spectra of samples having broadened peaks.

CHEMICAL SEPARATION SPECIFICITY

Alpha Spectroscopy – No data was provided for this delivery group that could be used to evaluate chemical separation specificity.

TARGET RADIONUCLIDE LIST IDENTIFICATION

Gamma Spectroscopy – No data was provided for this delivery group that could be used to judge energy calibration. The laboratory narrative discusses the overlap of U-235 and Ra-226 gamma rays; leading to overestimates of the concentrations of both. The radionuclides were assigned a U when they were not detected or an R where they were detected by gamma spectroscopy.

RESULT VERIFICATION – No data was provided for samples in this delivery group that could be used to verify results or check for transcription errors. It is verified that the EDD provided for alpha spectroscopy review is not consistent with the paper report.

COMMENTS/PROBLEMS

- Some gamma spectroscopy results were qualified because laboratory duplicate results for that isotope were not reported.
- Activity was reported in the blank for uranium and thorium. However no samples required qualification owing to low values of NAD sample and blank.
- No pair of field replicate results were reported under this delivery group.
- Sometimes the result calculated from the EDD was slightly different than the result reported in the paper report. The difference is notable but not alarming. Intermediate data that the lab used could have included more decimal places than the EDD I was provided..

DATA ASSESSMENT –

Gamma Spectroscopy: To the extent feasible the overall precision and accuracy, as determined by QA/QC checks, including detector calibration, tracer analysis and quality control samples (i.e.,

blanks, LCS, and duplicates) were found to be valid and acceptable. Due to various QC problems some analytes were qualified "J" (estimated) or "Q" (no duplicate result available). All action is detailed above.

INTRODUCTION

Weston Solutions, Inc. collected (19) sediment and waste samples during from 9/14/2011 through 9/21/2011. The samples were collected from the site as part of a preliminary investigation. Data validation activities were performed to the extent feasible, in accordance with the "*USACE Kansas City and St. Louis District Radionuclide Data Quality Evaluation Guidance for Alpha and Gamma Spectroscopy, Revision 01, June 2004*." The samples associated with this Delivery Group are as follows:

Sample_ID	Client_ID
B1.11654K	RMB-WST23A
B1.11655L	RMB-WST23B
B1.11656M	RMB-WST23C
B1.11657N	RMB-WST28B
B1.11658P	RMB-WST29B
B1.11659Q	RMB-WST34B
B1.11660H	RMB-WST37A
B1.11661J	RMB-WST37B

Sample_ID	Client_ID
B1.11720C	FBS-WST43A
B1.11721D	RMA-SD57
B1.11722E	RMA-SD58
B1.11723F	RMA-SD59
B1.11724G	RMA-SD60
B1.11725H	RMA-SD61
B1.11726J	RMA-SD62
B1.11727K	RMA-SD63
B1.11728L	RMA-WST06B(2)

Project Site: St Croix Alumina Processing Plant, St. Croix, Virgin Island
Delivery Group: 1100228

Sample_ID	Client_ID
B1.11729M	RMA-WST08B

Sample_ID	Client_ID
B1.11730E	RMA-WST18B

The following information was used to validate the analytical results, where feasible:

- Data Completeness/Sample Integrity
- Holding Time
- Calibration
- Tracer Analysis (Alpha Spec only)
- Quality Control Samples
  - Blanks (Lab and Field)
  - Laboratory Control Sample (LCS)
    - Duplicates (Laboratory and Field)
    - Matrix Spike (Ra-228 only)
- Quantitation and Detection Limits
- Chemical Separation Specificity (Alpha Spec only)
- Target Radionuclide List Identification (Gamma Spec only)
- Result Verification

DATA COMPLETENESS/SAMPLE INTEGRITY – The data package included a comprehensive case narrative, and sample results. However no result report was provided for gross alpha and beta, only information in an EDD. I was instructed not to review the gross alpha and beta data. Raw data, which are required to perform a complete data validation was not available. In addition, the NAREL written procedures do not include the equations used to calculate results, so recalculation was not possible for more than one reason.

There was nothing in the laboratory case narrative to suggest that samples were received in a compromised condition (e.g. not intact, in wrong sample containers or showing evidence of tampering). COC paperwork was available to review.

The samples being validated generally appeared to be the ones collected from the site; however there is the organizational issue of no one-to-one or many-to-one mapping of samples from COC to Delivery Group. For example sample RMB-WST22A appears on chain of custody # 2-092011-133530-0031 with other samples that are reported in the Delivery Group 1100228 lab report, but that sample actually is reported on the Delivery Group 1100227 lab report. It was not investigated whether all samples were analyzed for the intended analytes, and that all samples on all COC forms were analyzed.

HOLDING TIME – All samples were analyzed within 180 days from sample collection.

CALIBRATION

Alpha Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

Gamma Spectroscopy – No details were available concerning energy and efficiency, calibration or background determination frequency.

TRACER ANALYSIS

Alpha Spectroscopy (isotopic thorium, isotopic uranium)
Tracer analysis was performed on each sample to determine radiochemical recovery (yield) for alpha spectroscopy. The tracer recovery criteria, as per the USACE Data Quality Evaluation Guidance, are 50-100%. The tracer recovery criteria were met, with the exceptions listed below. Therefore, isotopic thorium results for that sample by alpha spectroscopy were qualified estimated "J" (low bias) due to low tracer recovery:

Sample_ID	Client_ID	Procedure	Yield%
B1.11655L	RMB-WST23B	NAREL TH-EICHROM	46

QUALITY CONTROL SAMPLES

Blanks (Field)

There were no field blanks associated with these data.

Blanks (Laboratory):

Alpha Spectroscopy - One (1) blank was analyzed per matrix for every twenty (20) samples.

Thorium Isotopes: No activity was reported in the thorium blank that exceeded the 2σ uncertainty, so no further investigation of the blanks was required.

Uranium Isotopes: U-234, U-235 and U-238 reported activities in the method blank exceeded their 2σ. The normalized absolute difference (NAD) was calculated and data for the following samples and analytes were qualified "J" due to NAD ≤ 2.58.

Sample_ID	Client_ID	Analyte	DERSampBlank
B1.11654K	RMB-WST23A	U235	1.37691
B1.11655L	RMB-WST23B	U235	1.406644
B1.11656M	RMB-WST23C	U235	1.492744
B1.11657N	RMB-WST28B	U235	2.233259
B1.11658P	RMB-WST29B	U235	2.151899
B1.11659Q	RMB-WST34B	U235	1.992886
B1.11660H	RMB-WST37A	U235	1.833597

Sample_ID	Client_ID	Analyte	DERSampBlank
B1.11661J	RMB-WST37B	U235	1.563524
B1.11720C	FBS-WST43A	U235	1.242028
B1.11721D	RMA-SD57	U235	0.8057025
B1.11722E	RMA-SD58	U235	0.6670069
B1.11723F	RMA-SD59	U235	1.288604
B1.11724G	RMA-SD60	U235	1.351801
B1.11725H	RMA-SD61	U235	0.8541988
B1.11726J	RMA-SD62	U235	1.172636
B1.11727K	RMA-SD63	U235	0.5836869
B1.11727K	RMA-SD63	U235	0.8501034
B1.11728L	RMA-WST06B(2)	U235	0.9646206
B1.11729M	RMA-WST08B	U235	1.280405
B1.11730E	RMA-WST18B	U235	1.659407

Gamma Spectroscopy - One (1) soil blank was analyzed for every twenty (20) samples. Lead-212 was reported in the blank at a value that exceeded 2σ. All lead-212 values for all samples in this delivery group carry a "J" due to the NAD of sample and blank being less than 2.58.

Laboratory Control Samples (LCS):

Gamma Spectroscopy - The LCS was performed and the default control limits as specified in the USACE Data Quality Evaluation Guidance have been met.

Alpha Spectroscopy –

Thorium Samples:
The LCS was performed and the default control limits of 70-130%, as specified in the USACE Data Quality Evaluation Guidance have been met.

Uranium Samples:
The LCS was performed and the default control limits of 70-130%, as specified in the USACE Data Quality Evaluation Guidance have been met.

Replicates (Field):

The field replicate associated with this Delivery Group is RMB-WST23C, which is a duplicate of RMB-WST23B. The replicate pair failed U-235 by gamma spectroscopy, with a NAD of 4.64. Poor performance on field replicates is not a reason to qualify a result, however. Replicate performance for other analytes and analytical procedures was satisfactory. U-235 detects by gamma spectroscopy end up being qualified R (rejected)

because of a known interference with Ra-226, so poor replicate performance in this instance is of no consequence.

Duplicates (Laboratory):

Alpha Spectroscopy –

Thorium Samples:
One (1) replicate was analyzed per matrix for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met in this delivery group. The Normalized Absolute Difference (NAD) was less than 1.96 for all results.

Uranium Samples:
One (1) replicate was analyzed per matrix for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met in this delivery group. The Normalized Absolute Difference (NAD) was less than 1.96 for all results.

Gamma Spectroscopy - One (1) soil replicate was analyzed for every twenty (20) samples. The soil laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met. The Normalized Absolute Difference (NAD) was less than 1.96 for all results.

Matrix Spike:

Alpha Spectroscopy – Recoveries were determined on a sample by sample basis; there was no matrix spike.

QUANTITATION AND DETECTION LIMITS

Gamma Spectroscopy sample results were reported in pCi/g and Alpha Spectroscopy results were reported in pCi/g.

Alpha Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Results less than the MDA were qualified with a U.
- The laboratory narrative identified U-235 peaks as broadened in certain samples, which suggests that some samples as-counted may have contained unwanted mass. The results for U-235 were already qualified due to activity detected in the laboratory blank.

Gamma Spectroscopy – Results, associated uncertainties and detection limits were reviewed for the following:

- Laboratory censored data and did not report values less than MDA. When blank results exceeded 2σ, the NAD of sample and blank was calculated and results were qualified with a Q where appropriate.

CHEMICAL SEPARATION SPECIFICITY

Alpha Spectroscopy – No data was provided for this delivery group that could be used to evaluate chemical separation specificity..

TARGET RADIONUCLIDE LIST IDENTIFICATION

Gamma Spectroscopy – No data was provided for this delivery group that could be used to judge energy calibration.

RESULT VERIFICATION – No data was provided for samples in this delivery group that could be used to verify results or check for transcription errors. No transcription errors were noticed when COCs were reviewed against EDDs or paper lab reports.

The radionuclide ratios of Ra-228 (gamma spectroscopy) to Th-228 (alpha spectroscopy) in each applicable sample have met the acceptable range of 0.5 to 2.

COMMENTS/PROBLEMS

- The laboratory narrative noted line broadening in uranium alpha spectroscopy and qualified some uranium results.
- Uranium was detected in the method blank.
- The field replicate pair exhibited a high normalized absolute deviation for uranium-235.
- Lead-212 was detected in the blank by gamma spectroscopy.
- There is not a clear relationship between chain of custody number and laboratory Delivery Group as discussed on page 2.
- Sample B1.11658P was counted on a gamma spec that failed an efficiency check.
- Sometimes the result calculated from the EDD was slightly different than the result reported in the paper report. The difference is notable but not alarming. Intermediate data that the lab used could have included more decimal places than the EDD I was provided.

DATA ASSESSMENT – To the extent feasible the overall precision and accuracy, as determined by QA/QC checks, including detector calibration, tracer analysis and quality control samples (i.e., blanks, LCS, and duplicates) were found to be valid and acceptable. Due to various QC problems some analytes were qualified "J" (estimated) or "Q" (no duplicate result available). All action is detailed above.

INTRODUCTION

Weston Solutions, Inc. collected and shipped thirteen (13) water samples in three coolers under three separate Chain of Custody(COC) forms: 2-092211-120450-0049, 2-092211-112105-0047, and 2-092211-115537-0048; these sample analyses are reported by NAREL as Delivery Group 1100229. The samples were collected between 9/14/2011 and 9/21/2011 as part of a preliminary investigation. Data validation activities were performed to the extent feasible, in accordance with the "*USACE Kansas City and St. Louis District Radionuclide Data Quality Evaluation Guidance for Alpha and Gamma Spectroscopy, Revision 01, June 2004*." The samples associated with this Delivery Group are as follows:

Sample_ID	Client_ID
B1.11662K	RMA-SW57
B1.11663L	RMS-SW45
B1.11664M	SCA-GW01
B1.11665N	SW-RMA-WST12
B1.11666P	UCP-SW35

Sample_ID	Client_ID

B1.11674P	SCA-GW07

All of the samples on the COCs could be related to samples listed in the reports for the Delivery Group, and all samples in the Delivery Group came from the identified COCs.

The following information was used to validate the analytical results, where feasible:

- Data Completeness/Sample Integrity
- Holding Time
- Calibration
- Tracer Analysis (Alpha Spec only)
- Quality Control Samples
    - Blanks (Lab and Field)
- Laboratory Control Sample (LCS)
    - Duplicates (Laboratory and Field)

  - Matrix Spike (Alpha Spec only)
- Quantitation and Detection Limits
- Chemical Separation Specificity (Alpha Spec only)
- Target Radionuclide List Identification (Gamma Spec only)
- Result Verification

DATA COMPLETENESS/SAMPLE INTEGRITY – The data package included a comprehensive case narrative, and sample results. However no result report was provided for gross alpha and beta, only information in a basic electronic data deliverable. I was instructed not to review the gross alpha and beta data. Raw data was provided in the form of pdf files. Raw data, in the form of a complete EDD was not provided, and such an EDD is required to recalculate results in a reasonable amount of time. In addition, the NAREL written procedures do not include the equations used to calculate results, so recalculation was not possible for more than one reason.

There was nothing in the laboratory case narrative to suggest that samples were received in a compromised condition (e.g. not intact, in wrong sample containers or showing evidence of tampering). COC paperwork was available to review. However, there were two versions of the COCs, one stating no preservatives, and later versions indicating preservation by nitric acid. The samples that were validated for this Delivery Group appeared to be the ones collected from the site.

The paper version of the lab reports appear to be consistent with the basic EDD that I was provided, except as noted

HOLDING TIME – All samples were analyzed within the specified holding time of 180 days from sample collection.

CALIBRATION

From the data provided it cannot be determined how frequently energy, efficiency, and background are determined. The energy calibration of the alpha spec system was spot checked and appears to be acceptable.

TRACER ANALYSIS

Alpha Spectroscopy (isotopic thorium, isotopic uranium, isotopic radium)
Tracer analysis was performed on each sample to determine radiochemical recovery (yield) for alpha spectroscopy. The tracer recovery criteria, as per the USACE Data Quality Evaluation Guidance, are 50-100%. The recoveries for samples in delivery group 1100229 were:

- Uranium (U-232) tracer recovery was acceptable for all samples.
- Radium (Ra-225) tracer recovery was acceptable for all samples.

- Thorium tracer recovery was acceptable for all samples except as follows.

Low Recovery					
Del_Group	Sample_ID	Client_ID	Procedure	LoYldFlag	Qualifier
1100229	B1.11664M	SCA-GW01	NAREL TH-EICHROM	J	U

Radium-228 by NAREL RA-05. Tracer recovery was not used, instead the matrix spike method was employed.

QUALITY CONTROL SAMPLES

Blanks (Field)

No field blank *per se* was recognized in this Delivery Group, but there is a rinse blank. WST-RIN01. Activity was detected in the rinse blank at levels that exceeded the MDC as follows. The J qualifier arises for some of these results because they were present in the method blank at levels that exceeded 2σ, and the normalized absolute difference (NAD) of rinse blank and method blank was less than 2.58.

Sample_ID	Client_ID	Procedure	Analyte	Qualifier
B1.11672M	WST-RIN01	NAREL TH-EICHROM	Th228	J
B1.11672M	WST-RIN01	NAREL U-EICHROM	U234	J
B1.11672M	WST-RIN01	NAREL U-EICHROM	U235	

Blanks (Laboratory)

One (1) blank was analyzed per matrix for every twenty (20) samples. Activity in excess of 2σ was reported in the method blank as follows:

Procedure	Analyte	Result	TwoSigma
NAREL RA-05	Ra228	0.436	0.39
NAREL TH-EICHROM	Th228	0.0837	0.032
NAREL U-EICHROM	U234	0.0165	0.015

These results led to the "J" qualification of some analytical results due to NAD of sample and method blank being less than 2.58.

Laboratory Control Samples (LCS)

Alpha Spectroscopy and Ra-228 –

The percent recovery from LCS was within the default control limits for all analytes, as specified in the USACE Data Quality Evaluation Guidance have been met.

Replicates (Field)

No sample pair was recognized as field replicates from review of the sample and analytical documentation. The review procedures do not require samples to carry qualifiers based on poor agreement of field replicates, thus no qualifiers were assigned based on lack of an identifiable field replicate.

Duplicates (Laboratory)

Alpha Spectroscopy and Ra-228

One (1) replicate was analyzed per matrix for every twenty (20) samples. The water laboratory duplicate sample criteria as specified in the USACE Data Quality Evaluation Guidance have been met in this delivery group. The Normalized Absolute Differences (NAD) were less than 1.96 for all results for all analytes.

Matrix Spike

Alpha Spectroscopy – Recoveries were determined on a sample by sample basis; there was no matrix spike.

Ra-228 by NAREL-RA-05 – The matrix spike recovery was in the acceptance range of 75 – 125%, which is acceptable.

QUANTITATION AND DETECTION LIMITS

Reporting Units:

- All results were reported in pCi/L in the paper reports. The EDD gives results in pCi/L for all analytes except for Ra-228 which is reported in pCi/ml.
- It was not necessary to convert all results to consistent units to complete the validation.

Alpha Spectroscopy and Ra-228 – Results, associated uncertainties and detection limits were reviewed for the following:

- Results less than the MDA were qualified with a U.

CHEMICAL SEPARATION SPECIFICITY

Alpha Spectroscopy – The regions of interest selected for the various isotopes appeared reasonable and appropriate.

Ra-226: The relative peak areas and energies of the peaks in the radium-226 region of interest were spot checked and they agree closely with published values.

Thorium: The relative peak areas and energies of the thorium-230, -232,and -228 peaks were spot checked and they agree closely with published values. There wasn't enough Th-227 counts in the spectra to check against. Other peaks are present in some spectra but this is probably to be expected since thorium-228 and thorium-227 both have short-lived alpha emitters immediately below them in their decay chains.

Uranium: The relative peak areas and energies of the U-232, -234,and -238 peaks were spot checked and they agree closely with published values. There weren't enough counts in the U-235 region of interest to check against.

TARGET RADIONUCLIDE LIST IDENTIFICATION

NA – This applies to gamma spectroscopy

RESULT VERIFICATION – Results were spot checked among the basic EDD, the paper report, and the raw data pdf. The paper version of the lab reports appear to be consistent with the basic EDD that I was provided and with the data provided in the raw data pdf. Sometimes the result calculated from the EDD was slightly different than the result reported in the paper report. The difference is notable but not alarming. Intermediate data that the lab used could have included more decimal places than the EDD I was provided.

COMMENTS/PROBLEMS

- No field replicate pair was identified.
- Sample SCA-GW01 (B1.11664M) was a non-detect, but would have been J qualified due to low recovery.

DATA ASSESSMENT – To the extent feasible the overall precision and accuracy, as determined by QA/QC checks, including detector calibration, tracer analysis and quality control samples (i.e., blanks, LCS, and duplicates) were found to be valid and acceptable. Due to various QC problems some analytes were qualified "J" (estimated) or "U" (not detected). All action is detailed above.

DATA VALIDATOR: Rick Haaker, CHP March 5, 2012.
