THE 1st Member of the Colonial Council for Frederiksted's Country District, G. B. FLEMING, Esqr., who had been previously elected, having failed to qualify his seat was declared vacant by the Colonial Council on the 20th day of August 1923.

It is hereby announced that an election will be held in the Court House at Frederiksted, on the 8th September 1923, for the purpose of electing 1 member to fill the vacancy which occurred.

The Polling will commence at 1 o'clock p. m. and in accordance with Section 30 of the Colonial Law, close at the earliest at 4 o'clock p. m.

No one can be considered unless he has announced himself as a candidate or has been so announced by one of the Electors of the Electoral District.

The announcement of candidature shall either be made in writing or by personal attendance of the announcer or announcers at the Electoral Board.

The written announcement signed by the announcer or announcers, must be sent to the undersigned Chairman at my official office, not later than 4 o'clock p. m. September 4, and for receiving announcements made personally, the Electoral Board will meet at the place where the election is to be held at 3 o'clock p. m. on WEDNESDAY September 5, 1923.

The Electoral Board for the Country District of Frederiksted, St. Croix, Virgin Islands of the U. S. A., August 28, 1923.

C. H. PAYNE,
Chairman.

M. CORNEIRO,
JEWELLER & OPTICIAN,

Don't Scratch Teeth

Beautify them in this scientific way

Don't try to whiten teeth by use of harsh abrasive. The enamel, if you harm it, won't come back. Polishing agents should be mild, as in Pepsodent.

Combat the dingy film. Do it as millions now are doing—in this scientific way. Then the prettier teeth you see everywhere now will come to you and yours.

The cloudy film

Your teeth are coated with a viscous film. It clings to teeth, gets between the teeth and stays. When not combated, it forms coats which are the basis of tartar. Film absorbs stains, making the teeth look dingy. Those cloudy teeth rob millions of much beauty.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germes breed in it, and they,

with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film.

Ways to end it

Film has been the great tooth problem. Old methods did not end it. So well-brushed teeth discolored and decayed. Tooth troubles have been constantly increasing. Now dental science, after long research, has found two ways to fight film. Able authorities have proved their efficiency. Careful people the world over now see and feel the results.

A new-type tooth paste has been created, made to meet modern requirements. The name is Pepsodent. These two film combatants are embodied in it for daily application.

Five new effects

Pepsodent brings five effects which science now demands. One is to multiply the starch diges-

tant in the saliva. That is there to digest starch deposits on teeth before they ferment and form acids. One is to multiply the alkalinity of the saliva. That is Nature's agent for neutralizing mouth acids—the cause of tooth decay. It leaves the teeth so highly polished that film less easily clings.

All five effects come from every application. So film, starch and acids are constantly combated. Forces are created which night and day fight enemies of teeth.

To countless homes, all the world over, this has brought a new era in teeth cleaning. The results will be life-lasting.

Send the coupon. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear. The results will surprise and convince you. Cut out the coupon now.
